### How to Use This Addendum

Make sure you're ready to teach by noting the **Necessary Materials and Pre-Lesson Prep** you will need to gather or complete prior to the lesson

Find high-leverage instructional moves in the **Lesson Look Fors**. This is what leaders should see when observing your instruction

Note how your lesson objective ties to your state **Standards**

Use the **Mathematical Goal of the Lesson** to keep you focused on the appropriate student outcome

Plan purposeful questioning and responses using **Opportunities to CFU**

Plan instruction around what students need to Know & Do to be successful on the Exit Ticket using the identified **Student Criteria for Success**

Plan to stress **Important Vocabulary** in the lesson. New vocab for the unit is indicated in bold

Find recommended lesson modifications, content knowledge boosters, and/or high-leverage instructional moves that may not be in your Teacher Edition located in **Other Notes to Inform Your Planning**

Lesson 9: Find related multiplication facts by adding and subtracting equal groups in array models		Date: _____														
<p><b>Standard(s)</b></p> <p><b>3.4K</b> solve one-step and two-step problems involving multiplication and division within 100 using strategies based on objects, pictorial models, including arrays, area models, and equal groups; properties of operations; or recall of facts</p>	<p><b>Notes for Intellectual Preparation &amp; Lesson Planning</b></p> <p><b>Necessary Materials and Pre-Lesson Prep</b></p> <ul style="list-style-type: none"> <li>• (S) Multiply by 2 (1–5) Pattern Sheet</li> <li>• (S) Personal white board</li> <li>• (S) Threes array no fill template</li> <li>• (S) Blank paper</li> </ul> <p><b>Lesson Agenda</b></p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th></th> <th style="text-align: right;">Time</th> </tr> </thead> <tbody> <tr> <td>I. VI. Exit Ticket*	5 min															

## UNIT SYNOPSIS

Students begin this unit by learning how to classify and identify elements of polynomials. In this first lesson, they're introduced to a LOT of new vocabulary words that they'll use throughout the unit. Students will also learn how to add, subtract, and multiply polynomials, revisiting major concepts like combining like terms (from Unit 1 of this course and from 6<sup>th</sup> and 7<sup>th</sup> grades), the Distributive Property, and applying properties of exponents (from Unit 7).

The second half of this unit will go over several different ways to factor polynomials, including using the greatest common factor, using special products, and using the tabular method.

## CONTENT STANDARDS

Below are the standards addressed in this unit.

Readiness Standards	Supporting Standards
<b>A.10(E)</b> factor, if possible, trinomials with real factors in the form $ax^2 + bx + c$ , including perfect square trinomials of degree two	<b>A.10(A)</b> add and subtract polynomials of degree one and degree two  <b>A.10(B)</b> multiply polynomials of degree one and degree two  <b>A.10(C)</b> determine the quotient of a polynomial of degree one and polynomial of degree two when divided by a polynomial of degree one and polynomial of degree two when the degree of the divisor does not exceed the degree of the dividend  <b>A.10(D)</b> rewrite polynomial expressions of degree one and degree two in equivalent forms using the distributive property  <b>A.10(F)</b> decide if a binomial can be written as the difference of two squares and, if possible, use the structure of a difference of two squares to rewrite the binomial

<b>Focus on Disciplinary Literacy</b>  	Mathematical Process Standard <b>(F)</b> – analyze mathematical relationships to connect and communicate mathematical ideas
	Mathematical Process Standard <b>(G)</b> – display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication

## LEARNING SUPPORTS BY LESSON

There is a checkmark for the math support if the lesson	Lessons →	L1	L2	L3	L4	L5	L6	L7	L8	L9	L10
	Math Supports										
makes a connection to prior content or from a previous unit or academic year	Access Prior Knowledge	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

# The EFFL Model

## Experience First, Formalize Later (EFFL) Model

### Opening

For every new lesson, the teacher begins by making the goals of the lesson crystal clear. The teacher does more than simply read the objective to the class. They make connections to previous learning, share how this learning fits into a bigger picture, or explain why this learning is important for future learning.

### Activity / Interaction With New Material (INM)

For this part of the lesson, students work in pairs or groups of four to experience new content through an activity. Students might be discussing a proposed scenario, working with other groups, or doing a simulation. The student activity is designed for students to be able to do without the help of the teacher. Of course, the teacher is watching and listening in to conversations in order to formatively assess student understanding. The teacher provides questions, cues, and prompts (not answers!) to help push groups forward when they are stuck or have made a mistake. As students begin to finish the activity, the teacher identifies students to write their work on the board. Most often, the teacher selects student work that will easily allow them to connect the experience to formal learning. Students write their work on the whiteboard in a single-color marker.

### Debrief Activity

Once students have recorded their responses in their workbook (see blue writing to the right), the teacher calls the whole group back together for a debrief. It is in this discussion that the teacher will help students formalize the learning. The teacher connects the student activity experience to new vocabulary, definitions, formulas, and algorithms. The formal learning is attached specifically to the experiences of the activity so that students can enhance their constructed understanding of the new content. The teacher writes all of the formal learning in a different color in the margins of the activity (see red writing to the right). The students add these ideas in the margins on their activity page and often think of this as the formal “notes” of the lesson. In all of the answer keys we provide on Math Medic, the teacher formal learning points are provided in the margins in a different color.

**Got Solutions?**  
In math class we solve lots of problems. But are there some problems that just don't HAVE a solution?

② Consider the line  $y = 2x - 5$ .  
④ Give the ordered pairs of at least 4 points that are on this line.  
Every pt. on the line is a solution to the equation.  
(0, -5) (1, -3) (2, -1) (4, 3)

⑤ Graph the line.

⑥ Is the point  $(-17, -39)$  on this line? How do you know?  
because it satisfies the equation  $y = 2x - 5$   
Yes!  $x = -17$  and  $y = -39$  make the equation true.  
 $-39 = 2(-17) - 5$   
 $-39 = -34 - 5$   
 $-39 = -39$  ✓

### QuickNotes

In this part of the lesson, the teacher uses the whole experience of the activity and the formalization in the debrief to summarize the learning from the lesson. Notice that we use the box to constrain the amount of formal “notes” that the teacher can provide.

**QuickNotes: Interpreting Solutions to Linear Systems Graphically**

A solution  $(x,y)$  to a linear system satisfies BOTH equations in the system and is on the graph of BOTH equations (intersection pt).  
A linear system can have 0, 1, or  $\infty$  many solutions

parallel lines  
0 solutions  
same  $m$ , diff.  $b$

intersecting lines  
1 solution  
diff.  $m$

coinciding lines  
 $\infty$  many solutions  
same  $m$ , same  $b$

### Student Practice

Now that students have arrived at some new learning, they need to be able to apply it in new contexts. Most often we have students complete these questions in pairs and occasionally we select one question to use as an exit ticket. If we have time, we have students write solutions on the whiteboard.

### Extra Practice

We typically give students around 3-5 “Extra Practice” problems for each lesson. We choose problems that are closely aligned with the Learning Objectives of the lesson. It is our belief that “less is more” here. We would rather students spend their Extra Practice time thinking deeply about just a few problems, rather than surface level thinking on many problems. When possible, we provide the answers at the bottom of the page, so they can immediately assess their understanding.

Slightly modified version of: <https://www.calc-medic.com/post/experience-first-formalize-later#:~:text=%E2%80%9CExperience%20First%2C%20Formalize%20Later%E2%80%9D,at%20formal%20definitions%20and%20formulas.>

## Before You EFFL!

Here are helpful resources that you guide you in the right direction before your first EFFL lesson!

### Why Should We EFFL?

The article advocates for the Experience First, Formalize Later (EFFL) teaching model, emphasizing its effectiveness in fostering deep understanding and flexible thinking in students. The author compares traditional teaching to a game of "Simon Says," where students merely mimic instructions without grasping underlying concepts. In contrast, EFFL encourages students to engage actively with problems, enhancing their ability to understand and apply calculus concepts creatively.

### Tips for Lesson Planning

The article offers practical advice for effective lesson planning beyond the exhaustive and overly detailed approaches often emphasized during teacher training. It underscores the importance of thoughtful preparation but rejects the notion that teachers need to script every minute or detail of a class session.

### Making the Most of Your EFFL Lesson Debrief

The article discusses the significance of the debriefing phase in the Experience First, Formalize Later (EFFL) lesson model, emphasizing its role in reinforcing learning and highlighting student contributions. The debrief session is seen as crucial for integrating academic vocabulary, emphasizing key lesson understandings, and valuing students' mathematical insights.

## While You EFFL!

While each lesson may be unique in context and skills, all lessons benefit from the following practices:

### Teacher Look Fors:

- Utilizing the Do Now to spark students' interest in the Activity.
- Use questioning to promote small group discussion and exploration, guided by monitoring questions.
- Connects Experience First to formal concepts using a **colored pencil/pen** to take notes along the margin during the Debrief.
- Facilitates whole-class discussions for students to reflect, share insights, and provides feedback that reinforces key concepts.
- Tracks time to adapt lesson pacing and support based on student response and engagement.

### Students Look Fors:

- In the Activity, students engage in group work and discourse.
- Exploring the activity, testing hypotheses and approaches (trial & error).
- Take notes on key ideas and concepts using different **colored pencil/pen** to take notes along the margin.
- Share thoughts and ideas that demonstrate their approach to their work.

### Other considerations

- During the **Experience First** phase, if most of your students seem stuck or disengaged, take a moment to pause, reset, and provide clear instructions. Some problems of the Activity are more suitable to do a whole-class discussion as a means to save some instructional time for Student Practice or the Exit Ticket. You are encouraged to adapt the EFFL (Experience First, Formalize Later) process to meet your students' needs while maintaining a focus on student-centered instruction.

## ROADMAP

AT A GLANCE: Unit 8 – Polynomials and Factoring			
Day	Date	Lesson	Lesson Title
There are 2 flexible Success Days that you can use anywhere in the unit. <ul style="list-style-type: none"> <li>Consider using 1 day between Lessons 6 and 7 to administer optional Topic Quiz 8.</li> <li>Consider using 1 day to review before the Unit 8 Exam.</li> </ul>			
1		1	Classifying and Identifying Elements of Polynomials

It can be skipped or replaced, but it was created to prime students for the INM.</p> <p>For <b>INM</b>: Students should be working through the INM with a partner or two as opposed to watching their teacher work out the INM problems. Students have worked with the Tabular Method for at least two days and should be able to build on what they already know to reason through the INM.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0; text-align: center;"> <p><b>Focus on Disciplinary Literacy</b></p>  <p>Debrief</p> </div> <p><b>NOTE:</b> There is an optional topic quiz on Edcite (Topic Quiz 8) to administer once you have made it through these first six lessons of the unit. The remaining lessons are on factoring polynomials.</p>	<p><b>Student Know/Do Chart</b></p> <ul style="list-style-type: none"> <li> Students can multiply polynomials.</li> <li> Students can identify when a word problem is asking them to multiply polynomials.</li> </ul>										

Lesson 8: Factoring Special Products		Date: _____										
Standard(s)	Notes for Intellectual Preparation & Lesson Planning	Lesson Look Fors										
<p>◆ <b>A.10(E)</b> factor, if possible, trinomials with real factors in the form <math>ax^2 + bx + c</math>, including perfect square trinomials of degree two</p> <p>◆ <b>A.10(D)</b> rewrite polynomial expressions of degree one and degree two in equivalent forms using the distributive property</p> <p>◆ <b>A.10(F)</b> decide if a binomial can be written as the difference of two squares and, if possible, use the structure of a difference of two squares to rewrite the binomial</p>	<p><b>Necessary Materials and Pre-Lesson Prep</b></p> <ul style="list-style-type: none"> <li>Lesson 8.8 Student Workbook pages</li> <li>Class set of red pens and colored pencils</li> <li>Optional but useful: algebra tiles (print   digital)</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Lesson Structure:</b></p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 20px;"><span style="color: red;">■</span></td> <td>Do Now (7 min)</td> </tr> <tr> <td><span style="color: blue;">■</span></td> <td>INM (18 min)</td> </tr> <tr> <td><span style="color: green;">■</span></td> <td>Debrief (5 min)</td> </tr> <tr> <td><span style="color: purple;">■</span></td> <td>Student Practice (15 min)</td> </tr> <tr> <td><span style="color: pink;">■</span></td> <td>Exit Ticket (10 min)</td> </tr> </table>  </div> <p><b>Mathematical Goal of this Lesson</b> By the end of this lesson, students should be able to identify and factor out the greatest common factor (GCF) from a polynomial.</p> <p><b>Opportunities to CFU</b>            ✓ INM: 2b, 2b, 4, 5                      ✓ Student Practice: 1, 2, 6, 7</p> <p><b>Other Notes to Inform Your Planning</b></p> <p>For <b>Do Now</b>: This Do Now should not be skipped or replaced. It activates students' prior knowledge of special products of binomials (Lesson 8.5) and primes students for "working backwards" in this lesson.</p> <p>About the <b>Tabular Method</b>: Students that internalized the patterns for special products of binomials from Lesson 8.5 may not need algebra tiles or the Tabular Method at all. These students might not always "show their work" because they really can do this in their head, but in this case that is acceptable as long as they can visually prove their work (using algebra tiles or the Tabular Method) when requested.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0; text-align: center;"> <p><b>Focus on Disciplinary Literacy</b></p>  <p>INM #2</p> </div>	<span style="color: red;">■</span>	Do Now (7 min)	<span style="color: blue;">■</span>	INM (18 min)	<span style="color: green;">■</span>	Debrief (5 min)	<span style="color: purple;">■</span>	Student Practice (15 min)	<span style="color: pink;">■</span>	Exit Ticket (10 min)	<p><b>Lesson Look Fors</b></p> <p><u>Look for teachers to...</u></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> use the provided monitoring questions in the green box on TE p55 to help students when they're stuck with INM #s 2-3, or the Qs provided in p56 for INM #s 4-5.</li> </ul> <p><u>Look for students to...</u></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> recall what they learned in Lesson 8.5, potentially flipping back in the workbook to revisit the "patterns" for special products of binomials.</li> <li><input type="checkbox"/> be able to use algebra tiles and/or the Tabular Method to justify their responses</li> </ul>
	<span style="color: red;">■</span>	Do Now (7 min)										
<span style="color: blue;">■</span>	INM (18 min)											
<span style="color: green;">■</span>	Debrief (5 min)											
<span style="color: purple;">■</span>	Student Practice (15 min)											
<span style="color: pink;">■</span>	Exit Ticket (10 min)											
<p><b>Important Vocabulary</b></p> <ul style="list-style-type: none"> <li>factor (noun)</li> <li>factor (verb)</li> <li>Difference of Squares</li> <li>Square of a Binomial</li> <li>Perfect Square Trinomial</li> </ul>		<p><b>Student Know/Do Chart</b></p> <p> Students can identify that there is a GCF in a polynomial expression and factor it out before factoring the remaining polynomial.</p> <p> Students can factor a perfect square trinomial.</p> <p> When all terms in a polynomial share a common factor, factoring it out can reveal a polynomial that is easier to factor.</p> <p> A perfect square trinomial is a trinomial that can be written as the square of a binomial.</p>										

Standard(s)	Notes for Intellectual Preparation & Lesson Planning	Lesson Look Fors										
<p>◆ <b>A.10(C)</b> determine the quotient of a polynomial of degree one and polynomial of degree two when divided by a polynomial of degree one and polynomial of degree two when the degree of the divisor does not exceed the degree of the dividend</p>	<p><b>Necessary Materials and Pre-Lesson Prep</b></p> <ul style="list-style-type: none"> <li>Lesson 8.10 Student Workbook</li> <li>Class set of red pens and colored pencils</li> </ul> <div data-bbox="394 305 1144 581" style="border: 1px solid black; padding: 5px;"> <p><b>Lesson Structure:</b></p> <table style="width: 100%;"> <tr> <td style="width: 20px;"><span style="color: red;">■</span></td> <td>Do Now (7 min)</td> </tr> <tr> <td><span style="color: blue;">■</span></td> <td>INM (21 min)</td> </tr> <tr> <td><span style="color: green;">■</span></td> <td>Debrief (2 min)</td> </tr> <tr> <td><span style="color: purple;">■</span></td> <td>Student Practice (15 min)</td> </tr> <tr> <td><span style="color: pink;">■</span></td> <td>Exit Ticket (10 min)</td> </tr> </table>  </div> <p><b>Mathematical Goal of this Lesson</b> By the end of this lesson, students should be able to use factoring to divide polynomials. While there are other ways to divide polynomials, we focus on factoring. Note that dividing polynomials has been assessed ONCE on the STAAR EOC (in 2023), and that this particular TEKS has been deprioritized because of its low frequency.</p> <p><b>Opportunities to CFU</b></p> <ul style="list-style-type: none"> <li>✓ INM: 6</li> <li>✓ Student Practice: 1, 2</li> </ul> <p><b>Other Notes to Inform Your Planning</b></p> <p>For <b>Do Now</b>: This Do Now should not be skipped or replaced, as it reminds students what it means to “divide to 1” with the familiar context of simplifying fractions. Students have used “divide to 1” since 6<sup>th</sup> grade to explain why, for example, <math>\frac{24}{30} = \frac{4 \cdot 6}{5 \cdot 6} = \frac{4}{5}</math>.</p> <p>For <b>Debrief</b>: As you circulate while students are engaged in the INM, see if you can find a group of students that use the reverse tabular method to just identify the other factor. If you do, you can show both methods during the Debrief and have students explain their work.</p> <div data-bbox="1029 1198 1444 1404" style="border: 1px solid black; padding: 5px; text-align: center;"> <p><b>Focus on Disciplinary Literacy</b></p>  <p>Debrief of #4</p> </div>	<span style="color: red;">■</span>	Do Now (7 min)	<span style="color: blue;">■</span>	INM (21 min)	<span style="color: green;">■</span>	Debrief (2 min)	<span style="color: purple;">■</span>	Student Practice (15 min)	<span style="color: pink;">■</span>	Exit Ticket (10 min)	<p><b>Look for teachers to...</b></p> <ul style="list-style-type: none"> <li>☐ connect what students are doing in this lesson to the factoring they have done in the previous three lessons.</li> <li>☐ avoid the language “cancel out,” which is vague in mathematics; use the specific phrase “divide to one” to reinforce what is actually happening.</li> </ul> <p><b>Look for students to...</b></p> <ul style="list-style-type: none"> <li>☐ use the factoring strategies they’ve learned in the previous three lessons to help them divide polynomials.</li> <li>☐ explain why having the same factor in the numerator and denominator means they “disappear” (because they divide to 1, and anything times 1 is itself!)</li> </ul>
<span style="color: red;">■</span>	Do Now (7 min)											
<span style="color: blue;">■</span>	INM (21 min)											
<span style="color: green;">■</span>	Debrief (2 min)											
<span style="color: purple;">■</span>	Student Practice (15 min)											
<span style="color: pink;">■</span>	Exit Ticket (10 min)											
<p><b>Important Vocabulary</b></p> <ul style="list-style-type: none"> <li>“divide to 1”</li> <li>dividend</li> <li>divisor</li> <li>factor (noun)</li> <li>factor (verb)</li> <li>Tabular Method</li> </ul>		<p><b>Student Know/Do Chart</b></p> <ul style="list-style-type: none"> <li> Students can factor a polynomial of the form <math>ax^2 + bx + c</math> when <math>a &gt; 1</math>.</li> <li> Students can identify common factors in the numerator and denominator of an expression and simplify that expression.</li> <li> When you have the same factor in the numerator and the denominator, that factor divides to 1.</li> <li> Anything times 1 is itself.</li> </ul>										

## Recommended Success Day Materials and Resources

### A.10(E): factor trinomials

- Imagine Math: Factor Polynomials Completely: SW | TE
- Imagine Math: Factor Trinomials When  $a = 1$ : SW | TE
- Imagine Math: Factor Trinomials When  $a > 1$ : SW | TE
- Kuta: Factor Polynomials

### A.10(A): add and subtract polynomials

- Imagine Math: Classify Polynomials: SW | TE
- Imagine Math: Add and subtract polynomials: SW | TE
- Kuta: Polynomial Basics
- Kahoot: Understanding Polynomials
- Kahoot: Add and Subtract Polynomials

### A.10(B): multiply polynomials

- Imagine Math: Multiply Monomials and Binomials: SW | TE
- ThatQuiz: Multiply Binomials
- Kahoot: Multiply Polyomials

### A.10(F): difference of squares

- Imagine Math: Difference of Squares: SW | TE
- Virtual Nerd video: How do you factor a polynomial using differences of squares?
- Virtual Nerd video: How do you use a shortcut to factor a perfect square trinomial?

### A.10(D): rewrite polynomials...using distributive property

- Imagine Math: Factoring Polynomials by GCF: SW | TE
- Khan Academy exercise: Factoring Polynomials by GCF
- GeoGebra activity: Finding Things in Common

### Mixed Polynomial Review

- General Review packet: pick and choose problems carefully!

### Unit 8 Tech Enhanced Question Practice

This problem set gives students opportunities to work with equation editor and drop-down menus on EdCite. It is not mandatory, and it can be retaken as many times as the student wishes to take it. You'll need to click "copy assignment" to be able to assign it to your students.

If student data indicates a pause point is not necessary, you can opt to move forward and reserve a Success Day to use at a later date.

**Unit 8 Exam**

Date: \_\_\_\_\_

Standard(s)

Notes for Intellectual Preparation &amp; Lesson Planning

- ◆ **A.10(E)** factor, if possible, trinomials with real factors in the form  $ax^2 + bx + c$ , including perfect square trinomials of degree two
- ◆ **A.10(A)** add and subtract polynomials of degree one and degree two
- ◆ **A.10(B)** multiply polynomials of degree one and degree two
- ◆ **A.10(C)** determine the quotient of a polynomial of degree one and polynomial of degree two when divided by a polynomial of degree one and polynomial of degree two when the degree of the divisor does not exceed the degree of the dividend
- ◆ **A.10(D)** rewrite polynomial expressions of degree one and degree two in equivalent forms using the distributive property
- ◆ **A.10(F)** decide if a binomial can be written as the difference of two squares and, if possible, use the structure of a difference of two squares to rewrite the binomial

**Necessary Materials and Pre-Lesson Prep**

- Ensure you can access UE8 on EdCite.

**Notes to Inform Your Planning**

Review the Unit 8 Exam on Curriculum Corner. Internalize and create an exemplar for the assessment prior to teaching the unit as part of unpacking the unit. Use your exemplar to spar with the solutions provided in the Assessment Companion on Curriculum Corner.

The scanning deadline for the Unit 8 Exam is February 19<sup>th</sup>, 2026.

For any test items that are not multiple choice, verify that student responses marked incorrect by Edcite truly are incorrect. (Edcite occasionally does not recognize all possible equivalent correct responses.)

# UNPACKED STANDARDS

Focus standards for this unit.

**A.10A** add and subtract polynomials of degree one and degree two

**A.10B** multiply polynomials of degree one and degree two

**Concepts (Know)**

- Polynomials of degree one and two

**Skills (Do)**

- Add  
- Subtract  
- Multiply

**Clarifications Including, but not limited to:**

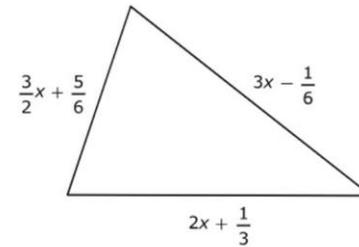

- Terms may include any rational numbers

**Limitations:**

- Polynomials limited to degree one and two (exponents of 1 or 2)

**10(A) 2024 – Q35**

A triangle has sides whose lengths in units are represented by polynomials as shown, where  $x$  is a positive integer.

Which expression represents the perimeter of the triangle in units?

(A)  $\frac{15}{2}x$

(B)  $\frac{47}{6}x$

(C)  $\frac{13}{2}x + 1$

(D)  $\frac{13}{2}x + \frac{4}{3}$

**10(B) 2025 – Q23**

Which expression is equivalent to  $(2k^2 - 3m)(3k - 4)$ ?

(A)  $6k^3 + 12m$

(B)  $-2k^3 + 3km$

(C)  $6k^3 - 8k^2 - 9km + 12m$

(D)  $-2k^2 - 9km - 12m$
