How to Use This Addenda

Make sure you're ready to teach by noting the **Necessary Materials and Pre-Lesson Prep** you will need to gather or complete prior to the lesson

Find high-leverage instructional moves in the **Lesson Look Fors**. This is what leaders should see when observing your instruction

Note how your lesson objectives ties to your state **Standards**

Plan purposeful questioning and responses using **Opportunities to CFU**

Plan to stress **Important Vocabulary** in the lesson. New vocab for the unit is indicated in bold

Use the **Mathematical Goal of the Lesson** to keep you focused on the appropriate student outcome

Plan instruction around what students need to Know & Do to be successful on the Exit Ticket using the identified **Student Know/Do Chart**

Find recommended lesson modifications, content knowledge boosters, and/or high-leverage instructional moves that may not be in your Teacher Edition located in **Other Notes to Inform Your Planning**

Lesson 9: Find related multiplication facts by adding and subtracting equal groups in array models

Standard(s): **3.4K** solve one-step and two-step problems involving multiplication and division within 100 using strategies based on objects, pictorial models, area models, and equal groups; properties of operations; or recall of facts

Necessary Materials and Pre-Lesson Prep

- (S) Multiply by 2 (1–5) Pattern Sheet
- (S) Personal white board
- (S) Threes array no fill template
- (S) Blank paper

Lesson Agenda	Time
I. Do Now (source: fluency #1)	5 min
II. Fluency*	8 min
III. Concept Development	25 min
IV. Student Practice	15 min
V. Student Debrief	7 min
VI. Exit Ticket*	5 min

Mathematical Goal of this Lesson

Students learn they can use decomposition to break one larger number into two smaller numbers as a strategy for multiplication. The goal of this lesson is simply for student to understand how to interpret and create an array that demonstrates such decomposition. Students will build on this understanding in subsequent lessons. This lesson also supports the goal of student thinking in terms of counting units, an overarching goal for academy math.

Opportunities to CFU

- ✓ Concept Development, by way of eliciting student responses
- ✓ Problems Set problems: #2, #3

Important Vocabulary

- array
- bracket**
- columns
- rows
- unit(s)

In this lesson, students are NOT responsible for the vocabulary distributive property. Please withhold as it will come up in later lessons.

Other Notes to Inform Your Planning

For Do Now: Use the Multiply by 2 (1–5) Pattern Sheet for your Do Now. 3 minutes for completion, 2 minutes whole group classwork check.

For Fluency: Complete the Group Counting activity (notice the inclusion of 4s in preparation for upcoming lessons) and Forms of Multiplication activity.

For Concept Development: Consider prepping personal whiteboard in advance. Spend no more than 12 minutes for CD Problem 1 and 13 minutes for CD Prob 2.

For Student Practice: consider creating an extra set of Qs like 1-3 in case students struggle with entry-level understanding. If they don't, move on to Qs 4 and above.

For Student Debrief: consider using the Eureka assigned Exit Ticket for whole group debrief exercise; Suggested strategy – guided discourse.

For Exit Ticket: Use Homework problems 2 & 3 for this lesson's Exit Ticket.

Student Know/Do Chart

- Shading, brackets, and/or dotted lines on an array will have mathematical significance
- brackets can identify parts or wholes
- dotted lines and shading represent decompositions
- We count units; In an array, counting rows is the same as counting units.
- Addition/subtraction and multiplication math facts (up to 4)
- interpret an array
- identify decompositions within an array
- Relate an annotated or labeled array to one or more number sentences
- Addition/subtraction (+/-, up to 4)
- Multiplication (2, 3, and 4)

UNIT SYNOPSIS

This unit expands on students' understanding of solving systems of linear equations and inequalities from Algebra 1 where they focused on two variable linear systems and systems of one linear equation and one quadratic equation. In this unit, students will extend their abilities to include three variables, and beyond, systems of linear equations and inequalities. Students will use solving by graphing, substitution, and elimination as well as learning how to solve systems using matrices on calculators or computers. In addition to solving systems of linear inequalities, students will be introduced to optimization using systems of inequalities. Systems of inequalities are often used to model real world situations and the optimization lesson introduces using feasible regions to find the maximum and minimum outputs of a function that is governed by given constraints.

Solving Equations and Inequalities: Solving an equation is the process of rewriting the equation to make what it says about its variable(s) as simple as possible. Properties of numbers and equality can be used to transform an equation (or inequality) into equivalent, simpler equations (or inequalities) in order to find solutions. Useful information about equations and inequalities (including solutions) can be found by analyzing graphs or tables. The numbers and types of solutions vary predictably, based on the type of equation.

- o To solve a system of equations, find a set of values that replace the variables in the equations and make each equation true.
- o You can solve a system of equations by writing equivalent systems until the value of one variable is clear. Then substitute to find the value(s) of the other variable.
- o You can solve a system of inequalities in more than one way. Graphing the solution is usually the most appropriate method. The solution is the set of all points that are solutions of each inequality in the system.
- o To solve systems of three equations in three variables, you can use some of the same algebraic methods you used to solve systems of two equations in two variables.
- o You can use a matrix to represent and solve a system of equations.

Functions: A function is a relationship between variables in which each value of the input variable is associated with a unique value of the output variable. Functions can be represented in a variety of ways, such as graphs, tables, equations, or words. Each representation is particularly useful in certain situations. Some important families of functions are developed through transformations of the simplest form of the function.

- o Some real-world problems involve multiple linear relationships. Optimizing accounts for all of these linear relationships and gives the solution to the problem.

Equivalence: A single quantity may be represented by many different expressions. The facts about a quantity may be expressed by many different equations (or inequalities).

- o You can solve a system of equations by writing equivalent systems until the value of one variable is clear. Then substitute to find the value(s) of the other variable.
- o To solve systems of three equations in three variables, you can use some of the same algebraic methods you used to solve systems of two equations in two variables.

Misconceptions:

- Some students may think that the x - and y -values in the solution to a system of two linear equations in two variables can never be equal in value.
- Some students may think the x -, y -, and z -values in the solution to a system of three linear equations in three variables can never be equal in value.
- Some students may think that a system of three equations in three variables can be represented on a coordinate plane rather than on a three-dimensional coordinate system.

Underdeveloped Concepts:

- Some students may not understand the differences between linear equations in one variable and linear equations in two variables.

Key Questions:

- How does knowing more than one solution strategy build mathematical flexibility?
- How can systems of equations be used to represent relationships between quantities?
- What methods can be used to write systems of equations?
- What methods can be used to solve systems of equations?
- How is solving a system of linear inequalities different from solving a system of linear equations?

CONTENT STANDARDS

Below are the standards addressed in this unit.

Readiness Standards	Supporting Standards
2A.3A Formulate systems of equations, including systems consisting of three linear equations in three variables and systems consisting of two equations, the first linear and the second quadratic.	2A.3E Formulate systems of at least two linear inequalities in two variables.
2A.3B Solve systems of three linear equations in three variables by using technology with matrices and substitution. (NOTE: AP readiness does not support inclusion of Gaussian elimination)	2A.3F Solve systems of two or more linear inequalities in two variables.
	2A.3G Determine possible solutions in the solution set of systems of two or more linear inequalities in two variables.

Focus on Disciplinary Literacy 	Mathematical Process Standard (F) – Analyze mathematical relationships to connect and communicate mathematical ideas.
	Mathematical Process Standard (G) – Display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication.

LEARNING SUPPORTS BY LESSON

The EFFL Model

Before You EFFL!

Here are helpful resources that you guide you in the right direction before your EFFL lesson!

Why Should We EFFL?

The article advocates for the Experience First, Formalize Later (EFFL) teaching model, emphasizing its effectiveness in fostering deep understanding and flexible thinking in students. The author compares traditional teaching to a game of "Simon Says," where students merely mimic instructions without grasping underlying concepts. In contrast, EFFL encourages students to engage actively with problems, enhancing their ability to understand and apply math concepts creatively.

Tips for Lesson Planning

The article offers practical advice for effective lesson planning beyond the exhaustive and overly detailed approaches often emphasized during teacher training. It underscores the importance of thoughtful preparation but rejects the notion that teachers need to script every minute or detail of a class session.

Making the Most of Your EFFL Lesson Debrief

The article discusses the significance of the debriefing phase in the Experience First, Formalize Later (EFFL) lesson model, emphasizing its role in reinforcing learning and highlighting student contributions. The debrief session is seen as crucial for integrating academic vocabulary, emphasizing key lesson understandings, and valuing students' mathematical insights.

While You EFFL!

While each lesson may be unique in context and skills, all lessons benefit from the following practices:

Teacher Look Fors:

- Utilizing the Do Now to spark students' interest in the Activity.
- Use questioning to promote small group discussion and exploration, guided by monitoring questions.
- Connects Experience First to formal concepts using a **colored pencil/pen** to take notes along the margin during the Debrief.
- Facilitates whole-class discussions for students to reflect, share insights, and provides feedback that reinforces key concepts.
- Tracks time to adapt lesson pacing and support based on student response and engagement.

Students Look Fors:

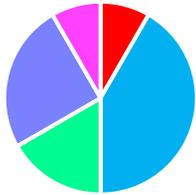

- In the Activity, students engage in group work and discourse.
- Exploring the activity, testing hypotheses and approaches (trial & error).
- Take notes on key ideas and concepts using different **colored pencil/pen** to take notes along the margin.
- Share thoughts and ideas that demonstrate their approach to their work.

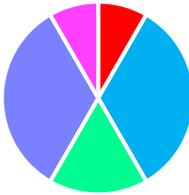

Other considerations

- During the **Experience First** phase, if most of your students seem stuck or disengaged, take a moment to pause, reset, and provide clear instructions. Some problems of the Activity are more suitable to do a whole-class discussion as a means to save some instructional time for Student Practice or the Exit Ticket. You are encouraged to adapt the EFFL (Experience First, Formalize Later) process to meet your students' needs while maintaining a focus on student-centered instruction.

ROADMAP

AT A GLANCE: Unit 3 – Systems of Linear Equations and Inequalities

Date: _____		
Lesson 1: Linear Systems		
<p>Standard(s)</p> <p>◆ 2A.3A Formulate systems of equations, including systems consisting of three linear equations in three variables and systems consisting of two equations, the first linear and the second quadratic.</p> <p>◆ 2A.3B Solve systems of three linear equations in three variables by using technology with matrices and substitution.</p>	<p>Notes for Intellectual Preparation & Lesson Planning</p> <p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> SE workbook Red and Blue “sticker dots” or equivalent per student <div data-bbox="499 407 1262 683" style="border: 1px solid black; padding: 5px;"> <p>Lesson Structure:</p> <ul style="list-style-type: none">  Do Now (5 min)  INM (25 min)  Debrief (10 min)  Student Practice (15 min)  Exit Ticket (5 min)  </div> <p>Mathematical Goal of this Lesson In this lesson, students will be able to find solutions to two-variable linear systems by graphing or by using substitution.</p> <p>Opportunities to CFU</p> <ul style="list-style-type: none"> ✓ INM #5-6 ✓ Debrief ✓ Student Practice #3-6 <div data-bbox="974 899 1352 1040" style="border: 1px solid black; padding: 5px;"> <p style="background-color: yellow; text-align: center;">Focus on Disciplinary Literacy</p> <div style="display: flex; align-items: center;">  <p>INM + Student Practice #1 & 2</p> </div> </div> <p>Other Notes to Inform Your Planning Your students should have seen linear systems in Algebra 1, but we're going to begin by investigating what it means to be a solution to an equation and then also a system. In this lesson we will only be solving systems that have one solution. In the next lesson we will investigate systems with infinite solutions or no solutions. We will focus on solving by graphing and substitution today, elimination comes later in the unit. This lesson calls for a large poster graph, red sticker dots, and blue sticker dots. Each student will need one red and one blue sticker dot. You can put some at each group before class starts to save some time. (You could do this activity with two colored markers on your whiteboard instead.)</p>	<p>Lesson Look Fors</p> <p><u>Look for teachers to...</u></p> <ul style="list-style-type: none"> <input type="checkbox"/> Have each student participate in plotting points in the INM. <input type="checkbox"/> Build on students' prior knowledge of solving with graphs. <p><u>Look for students to...</u></p> <ul style="list-style-type: none"> <input type="checkbox"/> Graph a system of lines and interpret the solution of the system in context. <input type="checkbox"/> Use substitution to solve systems algebraically.
<p>Important Vocabulary</p> <ul style="list-style-type: none"> system of linear equations ordered pair empty set, \emptyset standard form for systems of equations 		<p>Student Know/Do Chart</p> <p>Students can</p> <ul style="list-style-type: none">  Solve a system of linear equations by graphing and finding the point of intersection.  Solve a system of linear equations algebraically using substitution to find the solution for one variable and then plugging back into an equation to solve for the second variable.  Know that for an ordered pair to be the solution of a system of equations, the ordered pair needs to be the point of intersection of the graphs or make true statements when plugged into both equations.

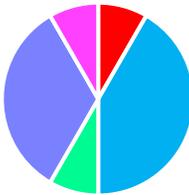

Date: _____		
Lesson 2: Number of Solutions		
<p>Standard(s)</p> <p>◆ 2A.3A Formulate systems of equations, including systems consisting of three linear equations in three variables and systems consisting of two equations, the first linear and the second quadratic.</p> <p>◆ 2A.3B Solve systems of three linear equations in three variables by using technology with matrices and substitution.</p>	<p>Notes for Intellectual Preparation & Lesson Planning</p> <p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> SE workbook <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Lesson Structure:</p> <ul style="list-style-type: none"> Do Now (5 min) INM (20 min) Debrief (10 min) Student Practice (20 min) Exit Ticket (5 min)  </div> <p>Mathematical Goal of this Lesson</p> <p>In this lesson, students will be able to determine if a system has one solution, no solution, or infinitely many solutions. Students will also identify the features that make a system consistent or inconsistent.</p> <p>Opportunities to CFU</p> <ul style="list-style-type: none"> ✓ After INM #2 & 3 ✓ Student Practice #1-5 <div style="border: 1px solid black; padding: 5px; margin: 10px 0; text-align: center;"> <p>Focus on Disciplinary Literacy</p>  <p>INM + Student Practice #2 & 3</p> </div>	<p>Lesson Look Fors</p> <p><u>Look for teachers to...</u></p> <ul style="list-style-type: none"> <input type="checkbox"/> Use the guiding questions to keep the students thinking and avoid answer giving. <input type="checkbox"/> Encourage students to draw upon what they know about what needs to be true for lines to intersect or never intersect. <p><u>Look for students to...</u></p> <ul style="list-style-type: none"> <input type="checkbox"/> Apply what they know about modeling situations with linear equations to compare two companies' costs. <input type="checkbox"/> Consider slope or rate in determining if lines will intersect, not just what can be seen on a graph.
<p>Important Vocabulary</p> <ul style="list-style-type: none"> system of linear equations empty set, \emptyset consistent dependent, consistent independent inconsistent 	<p>Other Notes to Inform Your Planning</p> <p>Today students will find that linear systems can have one solution, no solutions, or infinite solutions. This activity is set up so that students can use what they learned in the previous lesson to solve the first scenario. There is only one solution in the system described in question 1. Encourage students to think about what we talked about in the last lesson. Focus their attention on the graph they've made. When we transition into questions 2 and 3, we want to continue looking at the graphs and thinking about what they're telling us.</p>	<p>Student Know/Do Chart</p> <p>Students can</p> <ul style="list-style-type: none">  Determine the number of solutions a linear system has.  Know that consistent systems have lines that intersect. Consistent independent systems intersect and share one point called a solution. Consistent dependent systems are the same line and have infinitely many solutions.  Know that inconsistent systems have no solution and share no common points. Systems of equations of parallel lines are inconsistent.

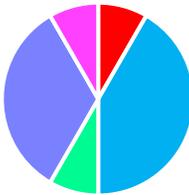

Date: _____		
Lesson 3: Elimination		
<p>Standard(s)</p> <p>◆ 2A.3A Formulate systems of equations, including systems consisting of three linear equations in three variables and systems consisting of two equations, the first linear and the second quadratic.</p> <p>◆ 2A.3B Solve systems of three linear equations in three variables by using technology with matrices and substitution.</p>	<p>Notes for Intellectual Preparation & Lesson Planning</p> <p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> SE workbook <div data-bbox="499 342 1251 618" style="border: 1px solid black; padding: 5px;"> <p>Lesson Structure:</p> <ul style="list-style-type: none">  Do Now (5 min)  INM (20 min)  Debrief (10 min)  Student Practice (20 min)  Exit Ticket (5 min)  </div> <p>Mathematical Goal of this Lesson</p> <p>In this lesson, students will be able to solve linear systems using elimination. Students have already been solving algebraically with substitution, which is a step they will apply in elimination. They may have also solved systems with substitution and elimination in Algebra 1. Students will then use elimination strategies to determine if a system has 0, 1, or infinite solutions.</p> <p>Opportunities to CFU</p> <ul style="list-style-type: none"> ✓ INM problems #1-2 ✓ Debrief ✓ Student Practice #1-3 <div data-bbox="976 976 1356 1114" style="border: 1px solid black; padding: 5px;"> <p style="background-color: yellow; text-align: center;">Focus on Disciplinary Literacy</p> <div style="display: flex; align-items: center;">  <p>Student Practice #3, 5, & 6</p> </div> </div> <p>Other Notes to Inform Your Planning</p> <p>The goal of this lesson is that students use their problem-solving skills to solve linear systems without a step-by-step procedure. Instead, we want them thinking about how they would approach each scenario to best solve it by considering what they are given. It is our hope in this lesson that students won't jump to graphing in their calculators or to solving with substitution. While they could do that, this system is much faster to solve without those methods, which is one of the reasons we like elimination. Sometimes it's a lot simpler than other methods. We want students to discover/rediscover when elimination is the best method to use.</p>	<p>Lesson Look Fors</p> <p><u>Look for teachers to...</u></p> <ul style="list-style-type: none"> <input type="checkbox"/> Use the guiding questions to keep the students thinking and avoid answer giving. <input type="checkbox"/> Support students as they determine which variable to eliminate first. Question students on why that variable? <p><u>Look for students to...</u></p> <ul style="list-style-type: none"> <input type="checkbox"/> Write or convert equations so they are in the same form before attempting elimination. <input type="checkbox"/> Select scalar multiples, sometimes negative ones, to create a multiple of an equation to use elimination.
<p>Important Vocabulary</p> <ul style="list-style-type: none"> system of linear equations empty set, \emptyset elimination method 		<p>Student Know/Do Chart</p> <p>Students can</p> <ul style="list-style-type: none">  Solve a system of equations using elimination by first comparing the coefficient of the variables in each equation when they are in the standard form.  When needed, use scalar multiples to rewrite equivalent equations to use in elimination.  Know that elimination can be used to determine the number of solutions a system has. If all the variables are eliminated in one step, then there are no solutions. If a contradiction is left (ex: $2=0$) or infinite solutions if an identity is left (ex: $2=2$).

Date: _____		
Lesson 4: Larger Systems of Equations		
<p>Standard(s)</p> <p>◆ 2A.3A Formulate systems of equations, including systems consisting of three linear equations in three variables and systems consisting of two equations, the first linear and the second quadratic.</p> <p>◆ 2A.3B Solve systems of three linear equations in three variables by using technology with matrices and substitution.</p>	<p>Notes for Intellectual Preparation & Lesson Planning</p> <p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> SE workbook <div data-bbox="499 342 1251 618" style="border: 1px solid black; padding: 5px;"> <p>Lesson Structure:</p> <ul style="list-style-type: none">  Do Now (5 min)  INM (25 min)  Debrief (5min)  Student Practice (20 min)  Exit Ticket (5 min)  </div> <p>Mathematical Goal of this Lesson</p> <p>In this lesson, students will be able to solve systems of equations with more than two variables. This lesson connects students' prior understanding of solving systems in two variables algebraically, to expand to systems with more unknowns.</p> <p>Opportunities to CFU</p> <ul style="list-style-type: none"> ✓ INM #2 ✓ Debrief ✓ Student Practice #1, 4, & 5 <div data-bbox="974 911 1356 1049" style="border: 1px solid black; padding: 5px;"> <p style="background-color: yellow; text-align: center;">Focus on Disciplinary Literacy</p> <div style="display: flex; align-items: center; justify-content: center;">  <div style="margin-left: 20px;">INM #2b</div> </div> </div> <p>Other Notes to Inform Your Planning</p> <p>So far this unit, we have focused on systems with two variables. This is the first lesson where students will work with three or more variables. Our goal is to simply get students used to thinking flexibly about working with systems. If they see a variable that can be solved for immediately, solve it! If they notice a variable can be eliminated immediately, eliminate it! We want to help students understand more deeply the idea that equations can be manipulated or scaled so that they are easier to work with. With three or more variables, students cannot just graph and look for the intersection of the lines. This lesson is preceded by a success day, be sure your students are solid on substitution and elimination with that day.</p>	<p>Lesson Look Fors</p> <p><u>Look for teachers to...</u></p> <ul style="list-style-type: none"> <input type="checkbox"/> Give students time to struggle and remind them of their work in prior lessons. <input type="checkbox"/> Highlight multiple students' methods of solving the system in #2 to illustrate there can be more than one approach. <p><u>Look for students to...</u></p> <ul style="list-style-type: none"> <input type="checkbox"/> Formulate and solve a system of equations to fit the information in the table. <input type="checkbox"/> Give their solutions in context or as ordered triples.
<p>Important Vocabulary</p> <ul style="list-style-type: none"> empty set, \emptyset ordered triple (x,y,z) system of linear equations 		<p>Student Know/Do Chart</p> <p>Students can</p> <ul style="list-style-type: none">  Solve a system of three linear equations in three variables algebraically using substitution or elimination.  A system of equations needs as many, or more, equations than the number of variables to have a unique solution.  Not all systems of three linear equations in three variables have a unique solution.

Date: _____												
Lesson 5: Systems of Inequalities												
Standard(s) ◆ 2A.3E Formulate systems of at least two linear inequalities in two variables. ◆ 2A.3F Solve systems of two or more linear inequalities in two variables. ◆ 2A.3G Determine possible solutions in the solution set of systems of two or more linear inequalities in two variables.	Notes for Intellectual Preparation & Lesson Planning Necessary Materials and Pre-Lesson Prep <ul style="list-style-type: none"> SE workbooks Each Student needs 3 colored pens (not red) or highlighters <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> Lesson Structure: <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 20px; text-align: center;">■</td> <td>Do Now (5 min)</td> </tr> <tr> <td style="text-align: center;">■</td> <td>INM (25 min)</td> </tr> <tr> <td style="text-align: center;">■</td> <td>Debrief (10 min)</td> </tr> <tr> <td style="text-align: center;">■</td> <td>Student Practice (15 min)</td> </tr> <tr> <td style="text-align: center;">■</td> <td>Exit Ticket (5 min)</td> </tr> </table>  </div> <p>Mathematical Goal of this Lesson In this lesson, students will be able to graph systems of linear inequalities. Students will find ordered pairs that are solutions for systems of linear inequalities that they solve by graphing.</p> <p>Opportunities to CFU</p> <ul style="list-style-type: none"> ✓ After INM #4 and 5 ✓ Debrief 	■	Do Now (5 min)	■	INM (25 min)	■	Debrief (10 min)	■	Student Practice (15 min)	■	Exit Ticket (5 min)	Lesson Look Fors <u>Look for teachers to...</u> <ul style="list-style-type: none"> <input type="checkbox"/> Discuss solid and dotted inequality graphs during the Debrief. <input type="checkbox"/> Give students the space to complete the activity with limited interruptions but do make sure groups are correctly graphing the inequalities. <u>Look for students to...</u> <ul style="list-style-type: none"> <input type="checkbox"/> Graph and shade systems of linear inequalities using different colored pens or highlighters and clearly identify any shared shaded region.
■	Do Now (5 min)											
■	INM (25 min)											
■	Debrief (10 min)											
■	Student Practice (15 min)											
■	Exit Ticket (5 min)											
Important Vocabulary <ul style="list-style-type: none"> system of linear inequalities solution set/region boundary line constraint empty set, \emptyset 	<div style="border: 1px solid black; padding: 5px; margin: 10px 0; text-align: center;"> Focus on Disciplinary Literacy  INM #5 & Student Practice #2b </div> <p>Other Notes to Inform Your Planning You'll notice that all the inequalities in the INM are \leq or \geq statements. This is helpful in case students aren't familiar with using a dashed versus a solid line. We will make sure to address this in the QuickNotes. Students will be working through the whole activity before the debrief. For the most part, they won't have much trouble with this activity. As you walk around and monitoring the groups, make sure to be checking that their inequalities are correct. It can be really frustrating for a student to spend a lot of time graphing only to find out they graphed the wrong inequality.</p>	Student Know/Do Chart Students can <ul style="list-style-type: none">  Graph a system of linear inequalities and shade the solution region.  Determine if a given point is in the solution region of a system of inequalities or not.  The solution of a system of linear inequalities is made up of all the points in the common solution region. The inequalities can be called constraints, and the region may be bounded or unbounded. 										

Date: _____		
Lesson 6: Optimization Using Systems of Inequalities		
<p>Standard(s)</p> <ul style="list-style-type: none"> ◆ 2A.3E Formulate systems of at least two linear inequalities in two variables. ◆ 2A.3F Solve systems of two or more linear inequalities in two variables. ◆ 2A.3G Determine possible solutions in the solution set of systems of two or more linear inequalities in two variables. 	<p>Notes for Intellectual Preparation & Lesson Planning</p> <p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> ▪ SE workbook ▪ Each Student needs 3 colored pens (not red) or highlighters <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Lesson Structure:</p> <ul style="list-style-type: none"> ■ Do Now (5 min) ■ INM (25 min) ■ Debrief (5 min) ■ Student Practice (20 min) ■ Exit Ticket (5 min)  </div> <p>Mathematical Goal of this Lesson In this lesson, students will be able to find the maximum or minimum of an objective function given linear constraints.</p> <p>Opportunities to CFU</p> <ul style="list-style-type: none"> ✓ INM problems #4-7 ✓ Debrief ✓ Student Practice #1 	<p>Lesson Look Fors</p> <p><u>Look for teachers to...</u></p> <ul style="list-style-type: none"> <input type="checkbox"/> Let students do the work but highlight students' solutions. <input type="checkbox"/> Support students in identifying the objective function and evaluating different points to find the maximum and minimum. <p><u>Look for students to...</u></p> <ul style="list-style-type: none"> <input type="checkbox"/> Generate and graph a system of inequalities and correctly identify the shaded region. <input type="checkbox"/> Solve for the points of intersection of the constraints that bound the shaded region.
<p>Important Vocabulary</p> <ul style="list-style-type: none"> ▪ system of linear inequalities ▪ solution set/region ▪ boundary line ▪ constraint ▪ solution/shaded region 	<p>Other Notes to Inform Your Planning</p> <p>Today we are combining all that we have learned this unit so far and applying it to optimization. Students have all the tools and information they need to complete this activity. You'll want to check in with groups of course, but we're really trying to let students work through this lesson on their own as much as possible. As groups complete questions, ask them to add their work to the board.</p>	<p>Student Know/Do Chart</p> <p>Students can</p> <ul style="list-style-type: none">  Graph a system of linear inequalities and shade the solution region.  Find the maximum and minimum value if they exist for a given function $f(x, y)$.  Know when optimizing an objective function that if there is a maximum or minimum to an objective function $f(x, y)$, then the max or min will come from the vertices of the shaded region.  If the shaded region is unbounded then there will only be a minimum or a maximum, but not both when solving a given objective function $f(x, y)$.

Date: _____												
Lesson 7: Introduction to Matrices												
Standard(s) ◆ 2A.3B Solve systems of three linear equations in three variables by using technology with matrices and substitution.	Notes for Intellectual Preparation & Lesson Planning Necessary Materials and Pre-Lesson Prep <ul style="list-style-type: none"> SE workbook TI-Nspire Calculators (1 per) or Desmos-Matrix Calculator <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> Lesson Structure: <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 20px; height: 15px; background-color: red;"></td> <td>Do Now (5 min)</td> </tr> <tr> <td style="width: 20px; height: 15px; background-color: cyan;"></td> <td>INM (25 min)</td> </tr> <tr> <td style="width: 20px; height: 15px; background-color: lightgreen;"></td> <td>Debrief (5 min)</td> </tr> <tr> <td style="width: 20px; height: 15px; background-color: purple;"></td> <td>Student Practice (20 min)</td> </tr> <tr> <td style="width: 20px; height: 15px; background-color: pink;"></td> <td>Exit Ticket (5 min)</td> </tr> </table>  </div> Mathematical Goal of this Lesson In this lesson, students will be able to identify matrix elements and perform matrix addition, subtraction, and multiplication. In this lesson students will understand that a system of linear equations can be represented using a matrix.		Do Now (5 min)		INM (25 min)		Debrief (5 min)		Student Practice (20 min)		Exit Ticket (5 min)	Lesson Look Fors Look for teachers to... <ul style="list-style-type: none"> <input type="checkbox"/> Establish the definitions of matrices and support students in learning the algorithms of matrix operations. <input type="checkbox"/> Support students with setting up matrices in their calculator. Look for students to... <ul style="list-style-type: none"> <input type="checkbox"/> Set up a matrix and identify a specific element. <input type="checkbox"/> Add, subtract, and multiply matrices using technology.
	Do Now (5 min)											
	INM (25 min)											
	Debrief (5 min)											
	Student Practice (20 min)											
	Exit Ticket (5 min)											
Important Vocabulary <ul style="list-style-type: none"> matrix element dimension, $m \times n$ square matrix 	Opportunities to CFU <ul style="list-style-type: none"> ✓ End of the INM ✓ Debrief <div style="text-align: right; margin-right: 50px;"> ✓ Student Practice #1-2, 13-14 </div> <div style="border: 1px solid black; padding: 5px; margin: 10px auto; width: fit-content;"> Focus on Disciplinary Literacy  Student Practice #13-15 </div> Other Notes to Inform Your Planning During the lesson students will use the calculator or Desmos Matrix Calculator on the computer to define matrices and perform operations such as addition, subtraction, and multiplications. This lesson introduces students to matrices which they will soon use to solve systems of linear equations. Students will only perform basic matrix operations by hand and then will use technology for solving systems with matrices. This topic is continued over the next two lessons.	Student Know/Do Chart Students can <ul style="list-style-type: none">  Identify a specific element of a given matrix.  Add or subtract given matrices when the dimensions match.  Determine if matrix multiplication can be performed by comparing the rows and columns of the matrices given, then complete the multiplication using technology.  Order matters in matrix multiplication. The columns of the first matrix must match the rows of the second matrix to multiply two matrices.

Lesson 9: Writing and Solving Linear Systems with Matrix Inverses												
Standard(s)	Notes for Intellectual Preparation & Lesson Planning	Lesson Look Fors										
<p>◆ 2A.3A Formulate systems of equations, including systems consisting of three linear equations in three variables and systems consisting of two equations, the first linear and the second quadratic.</p> <p>◆ 2A.3B Solve systems of three linear equations in three variables by using technology with matrices and substitution.</p>	<p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> SE workbook TI-Nspire Calculators (1 per) or Desmos-Matrix Calculator <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Lesson Structure:</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 20px; text-align: center;">■</td> <td>Do Now (5 min)</td> </tr> <tr> <td style="text-align: center;">■</td> <td>INM (25 min)</td> </tr> <tr> <td style="text-align: center;">■</td> <td>Debrief (5 min)</td> </tr> <tr> <td style="text-align: center;">■</td> <td>Student Practice (20 min)</td> </tr> <tr> <td style="text-align: center;">■</td> <td>Exit Ticket (5 min)</td> </tr> </table>  </div> <p>Mathematical Goal of this Lesson In this lesson, students will be able to write and solve systems of linear equations using matrix inverses to interpret real-world scenarios. After the students set up a system of equations, they will use matrices and technology to solve the systems and interpret their solutions in the context of the problems.</p> <p>Opportunities to CFU</p> <ul style="list-style-type: none"> ✓ Any INM problems ✓ Student Practice #1-2 <div style="border: 1px solid black; padding: 5px; margin: 10px 0; text-align: center;"> <p>Focus on Disciplinary Literacy</p>  <p>INM #1c & Debrief</p> </div> <p>Other Notes to Inform Your Planning This lesson has students combine writing systems of linear equations to solve contextual problems and using matrices to solve systems. Students may use matrix inverses or the RREF function to solve the linear systems. Students will not be expected to use matrices by hand, only technology. This lesson is designed to help students see that matrices, especially when supported with technology, can be an effective way to solve problems involving linear systems.</p>	■	Do Now (5 min)	■	INM (25 min)	■	Debrief (5 min)	■	Student Practice (20 min)	■	Exit Ticket (5 min)	<p>Look for teachers to...</p> <ul style="list-style-type: none"> <input type="checkbox"/> Support students in connecting their work from lesson 4 to using matrices to solve the systems they write. <p>Look for students to...</p> <ul style="list-style-type: none"> <input type="checkbox"/> Write their own system of linear equations and utilize matrices and technology to solve the system and apply the solution to the context of the problem.
■	Do Now (5 min)											
■	INM (25 min)											
■	Debrief (5 min)											
■	Student Practice (20 min)											
■	Exit Ticket (5 min)											
Important Vocabulary		Student Know/Do Chart										
<ul style="list-style-type: none"> matrix element dimension, $m \times n$ square matrix coefficient matrix variable matrix constant matrix extended matrix identity matrix inverse matrix 		<p>Students can</p> <ul style="list-style-type: none">  Write and solve three variable linear systems using matrices and the aid of technology.  Know that to solve a system using matrices, you need to create the inverse of the coefficient matrix and multiply it by the constant matrix or create the augmented matrix and use the RREF function.  Know that the answer to a system solved with matrices still needs to be written as an ordered pair, an ordered triple, or given in context of the scenario. 										

Recommended Unit 3 Success Days Material and Resources

Date: _____

To review **topics taught up to 3.3**, use the following resources. Your exit ticket data should be used to determine individualized needs. The resources can be used in small groups, whole groups, or independent groups and be integrated with other classroom routines, like computer aligned practice and teacher-led groups.

To review or practice solving linear systems by graphing, use...

Sample Activities & Tasks:

- Solving Systems by Graphing Investigation
- Solving Systems of Equations by Graphing Exploration and Extra Practice

Content Video Lessons:

- Solving Linear Systems by Using Graphs

To review or practice solving systems of linear equations algebraically, use...

Desmos Interactive Applets:

- Racing Dots Activity
- Wafers and Crème Activity

Sample Activities & Tasks:

- Solving Systems of Equations by Substitution Exploration and Extra Practice

To review **topics taught up to 3.6**, use the following resources. Your exit ticket data should be used to determine individualized needs. The resources can be used in small groups, whole groups, or independent groups and be integrated with other classroom routines, like computer aligned practice and teacher-led groups.

To review or practice writing & solving system of linear equations, use...

Sample Activities & Tasks:

- Tic Tac Toe Word Problem Activity
- The Storybook Diner Dilemma & Systems Word Problem Practice
- On Your Own: Formulating Systems of Linear Equations

Content Video Lessons:

- Systems of Equations with Elimination: Infinite Solutions

To review or practice solving systems of linear inequalities, use...

Sample Activities & Tasks:

- Systems of Linear Inequalities 1 TI-Calculator Activity
- Systems of Linear Inequalities 2 TI-Calculator Activity

Content Video Lessons:

- Graphing Systems of Linear Inequalities

To review or practice optimization using systems of linear inequalities, use...

Sample Activities & Tasks:

- Linear Programming Your Life (answers)
- Applications of Linear Systems TI-Calculator Activity
- Maximizing Your Efforts TI-Calculator Activity

Content Video Lessons:

- Graphing a Feasible Region
- Solving Linear Programming Problems
- Linear Programming
