How to Use This Addenda

Make sure you're ready to teach by noting the **Necessary Materials and Pre-Lesson Prep** you will need to gather or complete prior to the lesson

Find high-leverage instructional moves in the **Lesson Look Fors**. This is what leaders should see when observing your instruction

Note how your lesson objective ties to your state **Standards**

Plan purposeful questioning and responses using **Opportunities to CFU**

Plan to stress **Important Vocabulary** in the lesson. New vocab for the unit is indicated in bold

Use the **Mathematical Goal of the Lesson** to keep you focused on the appropriate student outcome

Plan instruction around what students need to Know & Do to be successful on the Exit Ticket using the identified **Student Know/Do Chart**

Find recommended lesson modifications, content knowledge boosters, and/or high-leverage instructional moves that may not be in your Teacher Edition located in **Other Notes to Inform Your Planning**

Standard(s)	Notes for Intellectual Preparation & Lesson Planning	Date:														
3.4K solve one-step and two-step problems involving multiplication and division within 100 using strategies based on objects, pictorial models, including arrays, area models, and equal groups; properties of operations; or recall of facts	<p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> (S) Multiply by 2 (1–5) Pattern Sheet (S) Personal white board (S) Threes array no fill template (S) Blank paper <p>Lesson Agenda</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Activity</th> <th>Time</th> </tr> </thead> <tbody> <tr> <td>I. Do Now (source: fluency #1)</td> <td>5 min</td> </tr> <tr> <td>II. Fluency*</td> <td>8 min</td> </tr> <tr> <td>III. Concept Development</td> <td>25 min</td> </tr> <tr> <td>IV. Student Practice</td> <td>15 min</td> </tr> <tr> <td>V. Student Debrief</td> <td>7 min</td> </tr> <tr> <td>VI. Exit Ticket*</td> <td>5 min</td> </tr> </tbody> </table> <p>Mathematical Goal of this Lesson Students learn they can use decomposition to break one larger number into two smaller numbers as a strategy for multiplication. The goal of this lesson is simply for student to understand how to interpret and create an array that demonstrates such decomposition. Students will build on this understanding in subsequent lessons. This lesson also supports the goal of student thinking in terms of counting units, an overarching goal for academy math.</p> <p>Opportunities to CFU</p> <ul style="list-style-type: none"> ✓ Concept Development, by way of eliciting student responses ✓ Problems Set problems: #2, #3 <p>Other Notes to Inform Your Planning</p> <p>For Do Now: Use the Multiply by 2 (1–5) Pattern Sheet for your Do Now. 3 minutes for completion, 2 minutes whole group classwork check.</p> <p>For Fluency: Complete the Group Counting activity (notice the inclusion of 4s in preparation for upcoming lessons) and Forms of Multiplication activity.</p> <p>For Concept Development: Consider prepping personal whiteboard in advance. Spend no more than 12 minutes for CD Problem 1 and 13 minutes for CD Prob 2.</p> <p>For Student Practice: consider creating an extra set of Qs like 1-3 in case students struggle with entry-level understanding. If they don't, move on to Qs 4 and above.</p> <p>For Student Debrief: consider using the Eureka assigned Exit Ticket for whole group debrief exercise; Suggested strategy – guided discourse.</p> <p>For Exit Ticket: Use Homework problems 2 & 3 for this lesson's Exit Ticket.</p> <p><small>Though not formally discussed yet, this is a foundation to understanding of distributive property. Students visually see multiplying the sum of two or more addends by a number will give the same result as multiplying each addend individually by the number and then adding the products together.</small></p>	Activity	Time	I. VI. Exit Ticket*	5 min															

UNIT SYNOPSIS

In Algebra I, students simplified polynomials and explored quadratic functions and equations (also during Unit 4 this year). During this unit, students describe and analyze the square root function, including the restriction(s) on domain/range, graph and zeros of the function. Students graph the function $f(x) = \sqrt{x}$, and analyze the key attributes such as domain, range, intercepts, and symmetries as well as graph transformations of the parent function. Students solve square root equations, including equations written with rational exponents, and identify extraneous solutions of square root equations. Students create square root equations from tables of data, solve the square root equations, and justify the solution in terms of the problem situation, identifying extraneous solutions.

Solving Equations and Inequalities: Solving an equation is the process of rewriting the equation to make what it says about its variable(s) as simple as possible. Properties of numbers and equality can be used to transform an equation (or inequality) into equivalent, simpler equations (or inequalities) in order to find solutions. Useful information about equations and inequalities (including solutions) can be found by analyzing graphs or tables. The numbers and types of solutions vary predictably, based on the type of equation.

- o You can use technology to formulate and solve square root equations.
- o Solving a square root equation may require that you square each side of the equation. This can introduce extraneous solutions.

Transformations: Transformations are mathematical functions that model concrete operations with figures. Transformations may be described geometrically or by coordinates. Symmetries of figures may be defined and classified by transformations.

- o The graph of any square root function is a transformation of the graph of the square root parent function, $f(x) = \sqrt{x}$.

Misconceptions:

- Some students may think that when solving a square root equation all calculated solutions are true solutions rather than checking each solution to identify extraneous solutions.

Underdeveloped Concepts:

- To be functions, square root functions have a limited domain based on the range of their inverse counterpart quadratic functions.
- Square root functions are often the first function family that students work with that has a strictly limited domain. Students may be used to a function's domain being all real numbers.

Key Questions:

- What graphs, key attributes, and characteristics are unique to square root functions?
- What types of square root equations produce extraneous solutions, and why are the solutions considered extraneous?
- What methods can be used to write square root equations?
- What kinds of mathematical and real-world situations can square root functions model?
- What are the real-world meanings of the key attributes of a square root function model?
- How can the key attributes of a square root function be used to make predictions and critical judgments?

CONTENT STANDARDS

Below are the standards addressed in this unit.

Readiness Standards	Supporting Standards
<p>2A.2A Graph the functions $f(x) = \sqrt{x}$, $f(x) = 1/x$, $f(x) = x^2$, $f(x) = \sqrt[3]{x}$, $f(x) = b^x$, $f(x) = x$, and $f(x) = \log_b(x)$ where b is 2, 10, and e, and, when applicable, analyze the key attributes such as domain, range, intercepts, symmetries, asymptotic behavior, and maximum and minimum given an interval.</p>	<p>2A.4H Solve quadratic square root inequalities. (*alignment to AP Calculus skill)</p>
<p>2A.4C Determine the effects on the graph of $f(x) = \sqrt{x}$ when $f(x)$ is replaced by $af(x)$, $f(x) + d$, $f(bx)$, and $f(x - c)$ for specific positive and negative values of a, b, c, and d.</p>	<p>2A.8B Use regression methods available through technology to write a quadratic square root function from a given set of data. (*alignment to AP Statistics skill)</p>
<p>2A.4F Solve quadratic and square root equations.</p>	

<p>Focus on Disciplinary Literacy</p>	<p>Mathematical Process Standard (F) – Analyze mathematical relationships to connect and communicate mathematical ideas.</p>
	<p>Mathematical Process Standard (G) – Display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication.</p>

The EFFL Model

Before You EFFL!

Here are helpful resources that you guide you in the right direction before your EFFL lesson!

Why Should We EFFL?

The article advocates for the Experience First, Formalize Later (EFFL) teaching model, emphasizing its effectiveness in fostering deep understanding and flexible thinking in students. The author compares traditional teaching to a game of "Simon Says," where students merely mimic instructions without grasping underlying concepts. In contrast, EFFL encourages students to engage actively with problems, enhancing their ability to understand and apply math concepts creatively.

Tips for Lesson Planning

The article offers practical advice for effective lesson planning beyond the exhaustive and overly detailed approaches often emphasized during teacher training. It underscores the importance of thoughtful preparation but rejects the notion that teachers need to script every minute or detail of a class session.

Making the Most of Your EFFL Lesson Debrief

The article discusses the significance of the debriefing phase in the Experience First, Formalize Later (EFFL) lesson model, emphasizing its role in reinforcing learning and highlighting student contributions. The debrief session is seen as crucial for integrating academic vocabulary, emphasizing key lesson understandings, and valuing students' mathematical insights.

While You EFFL!

While each lesson may be unique in context and skills, all lessons benefit from the following practices:

Teacher Look Fors:

- Utilizing the Do Now to spark students' interest in the Activity.
- Use questioning to promote small group discussion and exploration, guided by monitoring questions.
- Connects Experience First to formal concepts using a **colored pencil/pen** to take notes along the margin during the Debrief.
- Facilitates whole-class discussions for students to reflect, share insights, and provides feedback that reinforces key concepts.
- Tracks time to adapt lesson pacing and support based on student response and engagement.

Students Look Fors:

- In the Activity, students engage in group work and discourse.
- Exploring the activity, testing hypotheses and approaches (trial & error).
- Take notes on key ideas and concepts using different **colored pencil/pen** to take notes along the margin.
- Share thoughts and ideas that demonstrate their approach to their work.

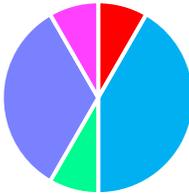

Other considerations

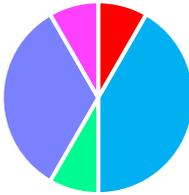

- During the **Experience First** phase, if most of your students seem stuck or disengaged, take a moment to pause, reset, and provide clear instructions. Some problems of the Activity are more suitable to do a whole-class discussion as a means to save some instructional time for Student Practice or the Exit Ticket. You are encouraged to adapt the EFFL (Experience First, Formalize Later) process to meet your students' needs while maintaining a focus on student-centered instruction.

Lesson 6: Square Root Regression													
Standard(s) ◆ 2A.8B Use regression methods available through technology to write a quadratic square root function from a given set of data. (*alignment to AP Statistics skill)	Notes for Intellectual Preparation & Lesson Planning Necessary Materials and Pre-Lesson Prep <ul style="list-style-type: none"> SE workbook Graphing calculator or Desmos <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> Lesson Structure: <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 20px;"></td> <td>Do Now (5 min)</td> <td rowspan="5" style="text-align: center; vertical-align: middle;">  </td> </tr> <tr> <td></td> <td>INM (25 min)</td> </tr> <tr> <td></td> <td>Debrief (5 min)</td> </tr> <tr> <td></td> <td>Student Practice (20 min)</td> </tr> <tr> <td></td> <td>Exit Ticket (5 min)</td> </tr> </table> </div> Mathematical Goal of this Lesson In this lesson, students will find and use a square root model for a given set of real data to draw conclusions in context by creating a regression model. Opportunities to CFU <ul style="list-style-type: none"> ✓ After the INM ✓ Debrief <div style="text-align: right; margin-right: 50px;"> ✓ Student Practice #1-3 </div> Other Notes to Inform Your Planning The Do Now begins with recalling the graphs of a few parent functions, examining data to sketch a best fit curve, and spiraling back to content from the earlier part of the unit by solving a square root equation. The INM transitions to using Desmos to create a scatterplot and a curve of best fit. Understanding which parent function and translations to incorporate and analyzing the accuracy of the curve of best fit by using the R-squared value. After settling on a curve of best fit, students are asked to apply the equation in different ways and interpret their answers. The shape of the scatterplot can help you determine which function to use. Data in a straight line indicates a linear regression, data in a curve that comes down indicates a quadratic regression, and data that curves slightly in the end indicates a square root regression. 											

Recommended Unit 5 Success Days Material and Resources

Date: _____

To review **topics taught in Unit 5**, use the following resources. Your exit ticket data should be used to determine individualized needs. The resources can be used in small groups, whole groups, or independent groups and be integrated with other classroom routines, like computer-aligned practice and teacher-led groups.

To review or practice square root functions and reflections, use...

Desmos Interactive Applets:

- Transformations of a Radical Function
- Transformed Square Root Function Activity

Sample Activities & Tasks:

- Radical Transformations TI-Calculator Exploration
- Graphing Square Root Functions Practice (answers)

Content Video Lessons:

- Square Root Functions (SB)
- Square Root Functions and Their Graphs

To review or practice solving square root equations, use...

Sample Activities & Tasks:

- Extraneous Solutions TI-Calculator Activity
- Solving Radical Equations Practice (answers)
- Multiple Radical Challenge (answers) **OMIT #8 and #10**

Content Video Lessons:

- Solving Equations Containing Radicals

To review or practice applying and interpreting square root equations, use...

Sample Activities & Tasks:

- Applying and Interpreting Square Root Equations Additional Practice

Content Video Lessons:

- Solving Square Root Equation Word Problems

To review or practice solving square root inequalities, use...

Content Video Lessons:

- Solving Radical Inequalities
- Solving Inequalities with Radicals

To review or practice graphing square root inequalities, use...

Desmos Interactive Applets:

- Square Root Inequality

Sample Activities & Tasks:

- Graphing Square Root Inequalities Practice (answers)

Content Video Lessons:

- Graph Square Root Inequalities
- Graphing Square Root Inequalities
- Graphing Square Root Inequality and Finding Domain and Range

To review or practice square root regression, use...

Sample Activities & Tasks:

- Square Root Regression TI-Nspire Lab Activity

Content Video Lessons:

- Square Root Regression

VERTICAL STANDARDS

This section details the **progression** of key student expectations (SEs) in the courses **before** and **after** this course. This will help you understand what **prior knowledge skills to build upon** and guide you in knowing what **skills you are preparing your students** for in the subsequent course.

Algebra 1	Algebra 2	Pre-Calculus
<ul style="list-style-type: none"> • A.6A Determine the domain and range of quadratic functions and represent domain and range using inequalities. • A.7A Graph quadratic functions on the coordinate plane and use the graph to identify key attributes, if possible, including x-intercept, y-intercept, zeros, maximum values, minimum values, vertex, and the equation of the axis of symmetry. • A.7C Determine the effects on the graph of the parent function $f(x) = x^2$ when $f(x)$ is replaced by $af(x)$, $f(x) + d$, $f(x - c)$, and $f(bx)$ for values of a, b, c, d. • A.8A Solve quadratic equations having real solutions by factoring, taking square roots, completing the square, and applying the quadratic formula. • A.8B Write, using technology, quadratic functions that provide a reasonable fit to data to estimate solutions and make predictions for real-world problems. • A.11A Simplify numerical radical expressions involving square roots. 	<ul style="list-style-type: none"> • 2A.2A Graph the functions $f(x) = \sqrt{x}$, $f(x) = 1/x$, $f(x) = x^2$, $f(x) = \sqrt[3]{x}$, $f(x) = b^x$, $f(x) = x$, and $f(x) = \log_b(x)$ where b is 2, 10, and e, and, when applicable, analyze the key attributes such as domain, range, intercepts, symmetries, asymptotic behavior, and maximum and minimum given an interval. • 2A.4C Determine the effects on the graph of $f(x) = \sqrt{x}$ when $f(x)$ is replaced by $af(x)$, $f(x) + d$, $f(bx)$, and $f(x - c)$ for specific positive and negative values of a, b, c, and d. • 2A.4F Solve quadratic and square root equations. • 2A.4H Solve quadratic square root inequalities. • 2A.8B Use regression methods available through technology to write a quadratic square root function from a given set of data. 	<ul style="list-style-type: none"> • (2.G) Graph functions, including exponential, logarithmic, sine, cosine, rational, polynomial, and power functions and their transformations, including $af(x)$, $f(x) + d$, $f(x - c)$, $f(bx)$ for specific values of a, b, c, and d in mathematical and real-world problems. • (2.I) Determine and analyze the key features of exponential, logarithmic, rational, polynomial, power, trigonometric, inverse trigonometric, and piecewise defined functions, including step functions such as domain, range, symmetry, relative maximum, relative minimum, zeros, asymptotes, and intervals over which the function is increasing or decreasing. • (5.J) Solve polynomial equations with real coefficients by applying a variety of techniques in mathematical and real-world problems. • (5.K) Solve polynomial inequalities with real coefficients by applying a variety of techniques and write the solution set of the rational inequality in interval notation in mathematical and real-world problems.
