How to Use This Addenda

Make sure you're ready to teach by noting the **Necessary Materials and Pre-Lesson Prep** you will need to gather or complete prior to the lesson

Find high-leverage instructional moves in the **Lesson Look Fors**. This is what leaders should see when observing your instruction

Note how your lesson objectives tie to your state **Standards**

Plan purposeful questioning and responses using **Opportunities to CFU**

Plan to stress **Important Vocabulary** in the lesson. New vocab for the unit is indicated in bold

Use the **Mathematical Goal of the Lesson** to keep you focused on the appropriate student outcome

Plan instruction around what students need to Know & Do to be successful on the **Exit Ticket** using the identified **Student Know/Do Chart**

Note exemplar pacing in the **Lesson Agenda**

Find recommended lesson modifications, content knowledge boosters, and/or high-leverage instructional moves that may not be in your Teacher Edition located in **Other Notes to Inform Your Planning**

Lesson 9: Find related multiplication facts by adding and subtracting equal groups in array models Date: _____

Standard(s)	Notes for Intellectual Preparation & Lesson Planning	Lesson Look Fors

UNIT SYNOPSIS

In Algebra 1, students were introduced to polynomial operations including polynomial long division. In this unit, students will further classify and define higher order polynomials and make judgments about key components of their graphs, including zeros, relative extrema, and end behavior. Students will perform operations on polynomials and will simplify a variety of expressions using adding, subtracting and division of polynomials. Polynomial division is used to determine exact factors and zeros of polynomial functions as well. Students will factor sum of cubes and difference of cubes. Students will utilize the Fundamental Theorem of Algebra to determine zeros of given polynomial functions. Through the Fundamental Theorem of Algebra, students will explore complex numbers and utilize complex conjugates to understand the number and types of zeros of a polynomial function.

Solving Equations & Inequalities: Solving an equation is the process of rewriting the equation to make what it says about its variable(s) as simple as possible.

- o You can add, subtract, and multiply two polynomials. The result is always another polynomial, so the set of polynomials is closed under addition, subtraction, and multiplication. In this respect, polynomials are like the integers, which share the same closure properties.

Equivalence: A single quantity may be represented by many different expressions.

The facts about a quantity may be expressed in many different equations.

- o You can divide polynomials using steps that are similar to the long division steps that you use to divide whole numbers.
- o The factors of the numbers a_n and a_0 in $p(x) = a_nx^n + a_{n-1}x^{n-1} + a_1x + a_0$ can help you factor $P(x)$ and solve the equation $P(x) = 0$.
- o The degree of a polynomial equation tells you how many roots the equation has.

Functions: A function is a relationship between variables in which each value of the input variable is associated with a unique value of the output variable. Functions can be represented in a variety of ways, such as graphs, tables, equations, or words. Each representation is particularly useful in certain situations. Some important families of functions are developed through transformations of the simplest form of the function.

- o A polynomial function has distinguishing “behaviors.” You can look at its algebraic form and know something about its graph. You can look at its graph and know something about its algebraic form.
- o Finding the zeros of a polynomial function will help you factor the polynomial, graph the function, and solve the related polynomial equation.
- o If $(x - a)$ is a factor of a polynomial, then the polynomial has value 0 when $x = a$. If a is a real number, then the graph of the polynomial has $(a, 0)$ as an x -intercept.

Misconceptions:

- When subtracting polynomials, some students may only distribute the negative to the leading coefficient instead of all of the terms of the polynomial being subtracted.
- Students may think that all zeros of a polynomial can be found by looking at the graph. There may also be complex zeros that are not x -intercepts.
- Students may think that complex conjugates always mean $a - bi$, where in reality it means the pair $a + bi$ and $a - bi$.
- Students may think that the Fundamental Theorem of Algebra guarantees real zeros when it only guarantees complex zeros. Even degree polynomials may have no real zeros.

Underdeveloped Concepts:

- Students may struggle with factoring which may make dividing polynomials more challenging.
- Many students do not know the traditional long division algorithm from elementary school, and it should not be assumed that they know how to divide long division or how to display a remainder as a fraction.
- Students may think that synthetic division and polynomial long division are interchangeable, where synthetic division only works with a linear divisor with a leading coefficient of 1.
- The terms Roots and Zeros can be used interchangeably, and both directly relate to the term Factors, but Factors is not an equivalent term.

Key Questions:

- How can the key attributes of polynomial functions be used to make predictions and critical judgments?
- How does the degree of a polynomial function affect the end behavior of the graph?
- How can the degree of a polynomial function be used to determine the potential number and types of zeros of the polynomial?
- How can the number and types of zeros of a polynomial function be determined? Algebraically and graphically.

CONTENT STANDARDS

Below are the standards addressed in this unit.

Readiness Standards	Supporting Standards
2A.2A Graph polynomial functions $f(x) = \sqrt{x}$, $f(x) = 1/x$, $f(x) = x^2$, $f(x) = \sqrt[3]{x}$, $f(x) = b^x$, $f(x) = x $, and $f(x) = \log_b(x)$ where b is 2, 10, and e , and, when applicable, analyze the key attributes such as domain, range, intercepts, symmetries, asymptotic behavior, and maximum and minimum given an interval.	2A.7B Add, subtract, and multiply polynomials.
2A.7E Determine linear and quadratic factors of a polynomial expression of degree three and of degree four, including factoring the sum and difference of two cubes and factoring by grouping.	2A.7C Determine the quotient of a polynomial of degree three and of degree four when divided by a polynomial of degree one and of degree two.
NOTE: Students will also work with higher degree polynomials and their graphs in accordance with vertical alignment and AP readiness goals.	2A.7D Determine the linear factors of a polynomial function of degree three and of degree four using algebraic methods.
	2A.8A Analyze data to select the appropriate model from among linear, quadratic, and exponential cubic models.

 Focus on Disciplinary Literacy	Mathematical Process Standard (F) – Analyze mathematical relationships to connect and communicate mathematical ideas.
	Mathematical Process Standard (G) – Display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication.

The EFFL Model

Before You EFFL!

Here are helpful resources that you guide you in the right direction before your EFFL lesson!

Why Should We EFFL?

The article advocates for the Experience First, Formalize Later (EFFL) teaching model, emphasizing its effectiveness in fostering deep understanding and flexible thinking in students. The author compares traditional teaching to a game of "Simon Says," where students merely mimic instructions without grasping underlying concepts. In contrast, EFFL encourages students to engage actively with problems, enhancing their ability to understand and apply math concepts creatively.

Tips for Lesson Planning

The article offers practical advice for effective lesson planning beyond the exhaustive and overly detailed approaches often emphasized during teacher training. It underscores the importance of thoughtful preparation but rejects the notion that teachers need to script every minute or detail of a class session.

Making the Most of Your EFFL Lesson Debrief

The article discusses the significance of the debriefing phase in the Experience First, Formalize Later (EFFL) lesson model, emphasizing its role in reinforcing learning and highlighting student contributions. The debrief session is seen as crucial for integrating academic vocabulary, emphasizing key lesson understandings, and valuing students' mathematical insights.

While You EFFL!

While each lesson may be unique in context and skills, all lessons benefit from the following practices:

Teacher Look Fors:

- Utilizing the Do Now to spark students' interest in the Activity.
- Use questioning to promote small group discussion and exploration, guided by monitoring questions.
- Connects Experience First to formal concepts using a **colored pencil/pen** to take notes along the margin during the Debrief.
- Facilitates whole-class discussions for students to reflect, share insights, and provides feedback that reinforces key concepts.
- Tracks time to adapt lesson pacing and support based on student response and engagement.

Students Look Fors:

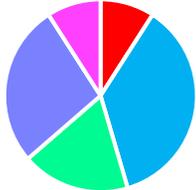

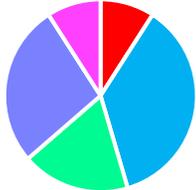

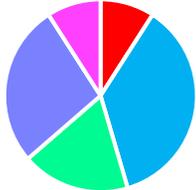

- In the Activity, students engage in group work and discourse.
- Exploring the activity, testing hypotheses and approaches (trial & error).
- Take notes on key ideas and concepts using different **colored pencil/pen** to take notes along the margin.
- Share thoughts and ideas that demonstrate their approach to their work.

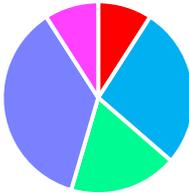

Other considerations

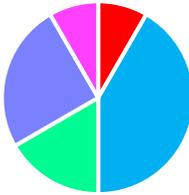

- During the **Experience First** phase, if most of your students seem stuck or disengaged, take a moment to pause, reset, and provide clear instructions. Some problems of the Activity are more suitable to do a whole-class discussion as a means to save some instructional time for Student Practice or the Exit Ticket. You are encouraged to adapt the EFFL (Experience First, Formalize Later) process to meet your students' needs while maintaining a focus on student-centered instruction.

In this lesson we will look at some visual patterns, create sequences, and look for a common difference. What we want students to notice is that the number of times they have to take the difference until they get a common difference tells them the degree of the polynomial. The first pattern is a linear relationship so they will find a common difference after taking the difference between terms one time. The second visual pattern or sequence describes a quadratic function so it will take finding the difference between the terms and then finding the difference of the differences to get to a common difference. The directions explaining how to take the differences can be a little confusing so double check that students are doing this correctly as you are checking in with the groups.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0; text-align: center;"> Focus on Disciplinary Literacy  INM & Student Practice </div>	■	Do Now (5 min)		■	INM (20 min)	■	Debrief (10 min)	■	Student Practice (15 min)	■	Exit Ticket (5 min)	Look for teachers to... <ul style="list-style-type: none"> ☐ Have students consider the differences between terms and the differences between the differences. ☐ Help students connect where the visual is in the pattern as the input (1st, 2nd, 3rd, ...) and the number of blocks in each visual as the output. <p>Look for students to...</p> <ul style="list-style-type: none"> ☐ Identify the change in the number of blocks as the difference and find the differences between the differences until they find a common difference. ☐ Associate the order of the differences needed to find a common difference with the degree of a polynomial.

Lesson 5: Factoring Polynomials		
Standard(s)	Notes for Intellectual Preparation & Lesson Planning	Lesson Look Fors
<p>◆ 2A.7E Determine linear and quadratic factors of a polynomial expression of degree three and of degree four, including factoring the sum and difference of two cubes and factoring by grouping.</p> <p>◆ 2A.7D Determine the linear factors of a polynomial function of degree three and of degree four using algebraic methods.</p>	<p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> SE workbook graphing calculator <div data-bbox="499 370 1199 646" style="border: 1px solid black; padding: 5px;"> <p>Lesson Structure:</p> <ul style="list-style-type: none">  Do Now (5 min)  INM (20 min)  Debrief (10 min)  Student Practice (15 min)  Exit Ticket (5 min)  </div> <p>Mathematical Goal of this Lesson In this lesson, students will determine if an expression is a factor of a polynomial through division and if it is, find all remaining factors. Students will then factor a polynomial completely.</p> <p>Opportunities to CFU</p> <ul style="list-style-type: none"> ✓ INM problems #3-4 ✓ Student Practice #1-5 ✓ Debrief <p>Other Notes to Inform Your Planning In previous lessons, students have learned about how the factored form of a polynomial shows the x-intercepts of the polynomial. In the last lesson, they were reminded that a factor of a number means that the factor divides the number evenly. For example, 6 is a factor of 24 because $24 \div 6 = 4$. Additionally, we know from this division that 4 is also a factor. We're going to use these concepts today to guide students to an understanding that if a polynomial divides another evenly then it is a factor. We can use polynomial division to find the factors of a polynomial which helps us to factor a polynomial or to write it in factored form. Also, as we are finding the factors, we are finding the x-intercepts of the polynomial.</p> <div data-bbox="1062 1000 1444 1141" style="border: 1px solid black; padding: 5px;"> <p style="background-color: yellow; text-align: center;">Focus on Disciplinary Literacy</p> <div style="text-align: center;">  <p>INM & Debrief</p> </div> </div>	<p>Look for teachers to...</p> <ul style="list-style-type: none"> <input type="checkbox"/> Connect factoring integers to factoring polynomials and build from what students know how to do from unit 4. <input type="checkbox"/> Help students make the connection between factors and x-intercepts so they can use the graph of a polynomial to look for potential factors. <p>Look for students to...</p> <ul style="list-style-type: none"> <input type="checkbox"/> Use the graph of polynomials to find factors and the tabular method to breakdown the whole polynomial into factors. <input type="checkbox"/> Use division to decide if a given polynomial is a factor of a larger polynomial by deciding if it divides evenly.

The number of complex zeros of a polynomial function is equal to the degree. This means not all of the zeros are always real or rational that can easily be found from a table or graph.

Recommended Unit 7 Success Days Material and Resources

Date: _____

To review **topics taught up to 7.5**, use the following resources. Your exit ticket data should be used to determine individualized needs. The resources can be used in small groups, whole groups, or independent groups and be integrated with other classroom routines, like computer aligned practice and teacher-led groups.

To review introduction to polynomial functions:

Desmos Interactive Applets:

- Polygraph Activity: Classifying Polynomials

Sample Activities & Tasks:

- TI-Calculator Activity: Applications of Polynomials
- The Largest Box Problem

Content Video Lessons:

- Volume of a Folded Box Problem (Without Calculus)
- Modeling with Polynomials
- Introduction to Polynomials

To review attributes of polynomial functions:

GeoGebra Interactive Applets:

- End Behavior of Polynomial Functions
- Even and Odd Function Tester
- Polynomial Multiplication Visualization
- Polynomial Long Division

Desmos Interactive Applets:

- Adding and Subtracting Polynomials
- Area: Multiplying Polynomials

Sample Activities & Tasks:

- Leading Coefficient Exploration for End Behavior (answers)
- Even and Odd Polynomials Practice (Algebraic/Graphically)

Content Video Lessons:

- Introduction to End Behavior of Polynomials
- End Behavior of Functions and Their Graphs
- Finding Extrema of Polynomials
- Even and Odd Functions
- Even and Odd Polynomials

To review **topics taught up to 7.10**, use the following resources. Your exit ticket data should be used to determine individualized needs. The resources can be used in small groups, whole groups, or independent groups and be integrated with other classroom routines, like computer aligned practice and teacher-led groups.

To review sum and difference of cubes and other factoring:

Sample Activities & Tasks:

- TI-Calculator Activity: Sums and Differences of Cubes
- Factoring by Grouping Skill Practice
- Sum and Difference of Cubes Skill Practice

Content Video Lessons:

- Introduction to Grouping
- Factoring Polynomials by Grouping
- Factoring Trinomials Using Product-Sum Method
- Factoring Quadratics with Common Factor and Grouping
- Factoring Quadratics with Negative Common Factor and Grouping

To review the Fundamental Theorem of Algebra:

Sample Activities & Tasks:

- Fundamental Theorem of Algebra Skills Practice (answers)
- TI-Calculator Activity: Exploring Polynomials: Factors, Roots, and Zeros
- Graphing Polynomials in Factored Form Practice

Content Video Lessons:

- The Fundamental Theorem of Algebra
- The Fundamental Theorem of Algebra 2
- The Conjugate Pair Theorem
- Graphing Polynomial Functions
- Finding Zeros and Their Multiplicities for a Polynomial
- End Behavior of Graphs of Polynomial Functions

<p>2A.7C Determine the quotient of a polynomial of degree three and of degree four when divided by a polynomial of degree one and of degree two.</p>	<p>Including, but not limited to:</p> <ul style="list-style-type: none"> • Division by factoring <ul style="list-style-type: none"> ○ Cancellation of common factors in numerator and denominator • Long division <ul style="list-style-type: none"> ○ Degree three and four polynomials by degree one and degree two polynomials • Synthetic division <ul style="list-style-type: none"> ○ Degree three and four polynomials by degree one polynomials in the form $x - c$ 	<ul style="list-style-type: none"> • Grade Level(s): <ul style="list-style-type: none"> ○ Algebra I determined the quotient of a polynomial of degree one and polynomial of degree two when divided by a polynomial of degree one and polynomial of degree two when the degree of the divisor does not exceed the degree of the dividend. ○ Algebra II introduces division of degree three and four polynomials by degree one and degree two polynomials. ○ Various mathematical process standards will be applied to this student expectation as appropriate.
<p>2A.7D Determine the linear factors of a polynomial function of degree three and of degree four using algebraic methods.</p>	<p>Including, but not limited to:</p> <ul style="list-style-type: none"> • Connections between roots and factors <ul style="list-style-type: none"> ○ If $x = c$ is a root of a polynomial, then $(x - c)$ is a factor of the polynomial. • Determination of linear and quadratic factors from tables <ul style="list-style-type: none"> ○ Identification of roots from a table, x values where y values equal zero ○ Writing roots as factors • Determination of linear and quadratic factors from graphs <ul style="list-style-type: none"> ○ Identification of roots from a graph, x-intercepts or zeros ○ Writing roots as factors • Determination of linear and quadratic factors by depressing polynomials <ul style="list-style-type: none"> ○ Rational root theorem to determine possible roots ○ Analysis of possible rational roots by synthetic division ○ Remainder Theorem 	<ul style="list-style-type: none"> • Grade Level(s): <ul style="list-style-type: none"> ○ Algebra I introduced factorization of polynomials of degree one and degree two. ○ Algebra II introduces synthetic division of degree three and four polynomials by degree one polynomials. ○ Algebra II introduces depression of polynomials to determine roots and factors of the polynomial. ○ Various mathematical process standards will be applied to this student expectation as appropriate.

VERTICAL STANDARDS

This section details the **progression** of key student expectations (SEs) in the courses **before** and **after** this course. This will help you understand what **prior knowledge skills to build upon** and guide you in knowing what **skills you are preparing your students** for in the subsequent course.

Algebra 1	Algebra 2	Pre-Calculus
<ul style="list-style-type: none"> • A.10A Add and subtract polynomials of degree one and degree two. • A.10B Multiply polynomials of degree one and degree two. • A.10C Determine the quotient of a polynomial of degree one and polynomial of degree two when divided by a polynomial of degree one and a polynomial of degree two when the degree of the divisor does not exceed the degree of the dividend. • A.10D Rewrite polynomial expressions of degree one and degree two in equivalent forms using the distributive property. • A.10E Factor, if possible, trinomials with real factors in the form $ax^2 + bx + c$, including perfect square trinomials of degree two. • A.10F Decide if a binomial can be written as the difference of two squares and, if possible, use the structure of a difference of two squares to rewrite the binomial. 	<ul style="list-style-type: none"> • 2A.2A Graph polynomial functions $f(x) = \sqrt{x}$, $f(x) = 1/x$, $f(x) = x^3$, $f(x) = \sqrt[3]{x}$, $f(x) = b^x$, $f(x) = x$, and $f(x) = \log_b(x)$ where b is 2, 10, and e, and, when applicable, analyze the key attributes such as domain, range, intercepts, symmetries, asymptotic behavior, and maximum and minimum given an interval. • 2A.7B Add, subtract, and multiply polynomials. • 2A.7C Determine the quotient of a polynomial of degree three and of degree four when divided by a polynomial of degree one and of degree two. • 2A.7D Determine the linear factors of a polynomial function of degree three and of degree four using algebraic methods. • 2A.7E Determine linear and quadratic factors of a polynomial expression of degree three and of degree four, including factoring the sum and difference of two cubes and factoring by grouping. • 2A.8A Analyze data to select the appropriate model from among linear, quadratic, and exponential cubic models. • NOTE: Students will also work with higher degree polynomials and their graphs in accordance with vertical alignment and AP readiness goals. 	<ul style="list-style-type: none"> • (2.G) Graph functions, including exponential, logarithmic, sine, cosine, rational, polynomial, and power functions and their transformations, including $af(x)$, $f(x) + d$, $f(x - c)$, $f(bx)$ for specific values of a, b, c, and d, in mathematical and real-world problems. • (2.I) Determine and analyze the key features of exponential, logarithmic, rational, polynomial, power, trigonometric, inverse trigonometric, and piecewise defined functions, including step functions such as domain, range, symmetry, relative maximum/minimum, zeros, asymptotes, and intervals over which the function is increasing/decreasing. • (2.J) Analyze and describe end behavior of functions, including exponential, logarithmic, rational, polynomial, and power functions, using infinity notation to communicate this characteristic in mathematical and real-world problems. • (2.N) Analyze situations modeled by functions, including exponential, logarithmic, rational, polynomial, and power functions, to solve real-world problems. • (5.J) Solve polynomial equations with real coefficients by applying a variety of techniques in mathematical and real-world problems. • (5.K) Solve polynomial inequalities with real coefficients by applying a variety of techniques and write the solution set of the polynomial inequality in interval notation in mathematical and real-world problems.
