How to Use This Addenda

Make sure you're ready to teach by noting the **Necessary Materials and Pre-Lesson Prep** you will need to gather or complete prior to the lesson

Find high-leverage instructional moves in the **Lesson Look Fors**. This is what leaders should see when observing your instruction

Note how your lesson objective ties to your state **Standards**

Plan purposeful questioning and responses using **Opportunities to CFU**

Plan to stress **Important Vocabulary** in the lesson. New vocab for the unit is indicated in bold

Date: _____

Lesson 9: Find related multiplication facts by adding and subtracting equal groups in array models

Standard(s)
3.4K solve one-step and two-step problems involving multiplication and division within 100 using strategies based on objects; pictorial models, including arrays, area models, and equal groups; properties of operations; or recall of facts

Necessary Materials and Pre-Lesson Prep

- (S) Multiply by 2 (1–5) Pattern Sheet
- (S) Personal white board
- (S) Threes array no fill template
- (S) Blank paper

Lesson Agenda		Time
I. Do Now (source: fluency #1)		5 min
II. Fluency*		8 min
III. Concept Development		25 min
IV. Student Practice		15 min
V. Student Debrief		7 min
VI. Exit Ticket*		5 min

Mathematical Goal of this Lesson
Students learn they can use decomposition to break one larger number into two smaller numbers as a strategy for multiplication. The goal of this lesson is simply for student to understand how to interpret and create an array that demonstrates such decomposition. Students will build on this understanding in subsequent lessons. This lesson also supports the goal of student thinking in terms of counting units, an overarching goal for academy math.

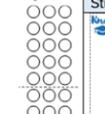

Opportunities to CFU

- ✓ Concept Development, by way of eliciting student responses
- ✓ Problems Set problems: #2, #3

7 threes = 5 threes + 2 threes

$7 \times 3 = 5 \times 3 + 2 \times 3$

$21 = 15 + 6$

Other Notes to Inform Your Planning

For Do Now: Use the Multiply by 2 (1–5) Pattern Sheet for your Do Now. 3 minutes for completion, 2 minutes whole group classwork check.

For Fluency: Complete the Group Counting activity (notice the inclusion of 4s in preparation for upcoming lessons) and Forms of Multiplication activity.

For Concept Development: Consider prepping personal whiteboard in advance. Spend no more than 12 minutes for CD Problem 1 and 13 minutes for CD Prob 2.

For Student Practice: consider creating an extra set of Qs like 1-3 in case students struggle with entry-level understanding. If they don't, move on to Qs 4 and above.

For Student Debrief: consider using the Eureka assigned Exit Ticket for whole group debrief exercise; Suggested strategy – guided discourse.

For Exit Ticket: Use Homework problems 2 & 3 for this lesson's Exit Ticket.

Though not formally discussed yet, this is a foundation to understanding of distributive property. Students visually see multiplying the sum of two or more addends by a number will give the same result as multiplying each addend individually by the number and then adding the products together.

Lesson Look Fors

Look for teachers to...

- Have established a signaling routine for choral response or work show during the respective fluency activities
- Use a think aloud to describe why they shade what portions of the array, or use a different symbol in the array
- Make the focus of the lesson understanding the visual representations

Look for students to...

- Explain what they see in the array and how it relates to a given number sentence.

Student Criteria for Success

- Shading, brackets, and/or dotted lines on an array will have mathematical significance
- brackets can identify parts or wholes
- dotted lines and shading represent decompositions
- We count units; In an array, counting rows is the same as counting units.
- Addition/subtraction and multiplication math facts (up to 4)
- Interpret an array
- identify decompositions within an array
- Relate an annotated or labeled array to one or more number sentences
- Addition/subtraction (+/- up to 4)
- Multiplication (2, 3, and 4)

Important Vocabulary

- array
- bracket**
- columns
- rows
- unit(s)

In this lesson, students are NOT responsible for the vocabulary distributive property. Please withhold as it will come up in later lessons.

Note exemplar pacing in the **Lesson Agenda**

Use the **Mathematical Goal of the Lesson** to keep you focused on the appropriate student outcome

Plan instruction around what students need to Know & Do to be successful on the Exit Ticket using the identified **Student Criteria for Success**

Find recommended lesson modifications, content knowledge boosters, and/or high-leverage instructional moves that may not be in your Teacher Edition located in **Other Notes to Inform Your Planning**

UNIT SYNOPSIS

In early grades, students investigated the properties of circles and in Grade 7, students defined pi, π , as the ratio of the circumference to the diameter of a circle. Since students have already had Algebra 1, they now are introduced to the equation of a circle. Then, they learn circle parts beyond “radius” and “diameter,” including “chord” and “tangent” and their properties. Students also learn about angles created by circle parts, including inscribed angles and central angles. Toward the end of the unit, students revisit circumference and area so that they may develop an understanding of area of a sector and arc length.

CONTENT STANDARDS

Below are the standards addressed in this unit.

Readiness Standards	Supporting Standards
G.11(B) determine the area of composite two-dimensional figures comprised of a combination of triangles, parallelograms, trapezoids, kites, regular polygons, or sectors of circles to solve problems using appropriate units of measure	G.12(A) apply theorems about circles, including relationships among angles, radii, chords, tangents, and secants, to solve non-contextual problems G.12(B) apply the proportional relationship between the measure of an arc length of a circle and the circumference of the circle to solve problems G.12(E) show that the equation of a circle with center at the origin and radius is $x^2 + y^2 = r^2$ and determine the equation for a graph of a circle with radius r and center (h, k) , $(x - h)^2 + (y - k)^2 = r^2$;

Focus on Disciplinary Literacy 	Mathematical Process Standard (F) – analyze mathematical relationships to connect and communicate mathematical ideas
	Mathematical Process Standard (G) – display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication

The EFFL Model

Experience First, Formalize Later (EFFL) Model

Opening

For every new lesson, the teacher begins by making the goals of the lesson crystal clear. The teacher does more than simply read the objective to the class. They make connections to previous learning, share how this learning fits into a bigger picture, or explain why this learning is important for future learning.

Activity / Interaction With New Material (INM)

For this part of the lesson, students work in pairs or groups of four to experience new content through an activity. Students might be discussing a proposed scenario, working with other groups, or doing a simulation. The student activity is designed for students to be able to do without the help of the teacher. Of course, the teacher is watching and listening in to conversations in order to formatively assess student understanding. The teacher provides questions, cues, and prompts (not answers!) to help push groups forward when they are stuck or have made a mistake. As students begin to finish the activity, the teacher identifies students to write their work on the board. Most often, the teacher selects student work that will easily allow them to connect the experience to formal learning. Students write their work on the whiteboard in a single-color marker.

Debrief Activity

Once students have recorded their responses in their workbook (see blue writing to the right), the teacher calls the whole group back together for a debrief. It is in this discussion that the teacher will help students formalize the learning. The teacher connects the student activity experience to new vocabulary, definitions, formulas, and algorithms. The formal learning is attached specifically to the experiences of the activity so that students can enhance their constructed understanding of the new content. The teacher writes all of the formal learning in a different color in the margins of the activity (see red writing to the right). The students add these ideas in the margins on their activity page and often think of this as the formal “notes” of the lesson. In all of the answer keys we provide on Math Medic, the teacher formal learning points are provided in the margins in a different color.

2. a. Graph $\triangle ABC$ after moving it left four and up two.
 $(x,y) \rightarrow (x-4, y+2)$
b. Give the ordered pairs of the new triangle.
 $A = (-5, 5)$ $B = (-1, 8)$
 $C = (-4, 2)$
c. Describe what happened to the measures of the three angles and three side lengths of the triangle after moving it.
Translations are rigid transformations they stayed the same.

QuickNotes

In this part of the lesson, the teacher uses the whole experience of the activity and the formalization in the debrief to summarize the learning from the lesson. Notice that we use the box to constrain the amount of formal “notes” that the teacher can provide.

Lesson 3.2 – Translations

QuickNotes
LT#1
Translations preserve lengths + angles (rigid movement)

LT#2
Translation rule
 $(x,y) \rightarrow (x \pm \quad, y \pm \quad)$
original point becomes horizontal movement vertical movement
Every pt. moves same distance!

Student Practice

Now that students have arrived at some new learning, they need to be able to apply it in new contexts. Most often we have students complete these questions in pairs and occasionally we select one question to use as an exit ticket. If we have time, we have students write solutions on the whiteboard.

Extra Practice

We typically give students around 3-5 “Extra Practice” problems for each lesson. We choose problems that are closely aligned with the Learning Objectives of the lesson. It is our belief that “less is more” here. We would rather students spend their Extra Practice time thinking deeply about just a few problems, rather than surface level thinking on many problems. When possible, we provide the answers at the bottom of the page, so they can immediately assess their understanding.

Slightly modified version of: <https://www.calc-medic.com/post/experience-first-formalize-later#:~:text=%E2%80%9CExperience%20First%2C%20Formalize%20Later%E2%80%9D,at%20formal%20definitions%20and%20formulas.>

Before You EFFL!

Here are helpful resources that you guide you in the right direction before your first EFFL lesson!

Why Should We EFFL?

The article advocates for the Experience First, Formalize Later (EFFL) teaching model, emphasizing its effectiveness in fostering deep understanding and flexible thinking in students. The author compares traditional teaching to a game of "Simon Says," where students merely mimic instructions without grasping underlying concepts. In contrast, EFFL encourages students to engage actively with problems, enhancing their ability to understand and apply calculus concepts creatively.

Tips for Lesson Planning

The article offers practical advice for effective lesson planning beyond the exhaustive and overly detailed approaches often emphasized during teacher training. It underscores the importance of thoughtful preparation but rejects the notion that teachers need to script every minute or detail of a class session.

Making the Most of Your EFFL Lesson Debrief

The article discusses the significance of the debriefing phase in the Experience First, Formalize Later (EFFL) lesson model, emphasizing its role in reinforcing learning and highlighting student contributions. The debrief session is seen as crucial for integrating academic vocabulary, emphasizing key lesson understandings, and valuing students' mathematical insights.

While You EFFL!

While each lesson may be unique in context and skills, all lessons benefit from the following practices:

Teacher Look Fors:

- Utilizing the Do Now to spark students' interest in the Activity.
- Use questioning to promote small group discussion and exploration, guided by monitoring questions.
- Connects Experience First to formal concepts using a **colored pencil/pen** to take notes along the margin during the Debrief.
- Facilitates whole-class discussions for students to reflect, share insights, and provides feedback that reinforces key concepts.
- Tracks time to adapt lesson pacing and support based on student response and engagement.

Students Look Fors:

- In the Activity, students engage in group work and discourse.
- Exploring the activity, testing hypotheses and approaches (trial & error).
- Take notes on key ideas and concepts using different **colored pencil/pen** to take notes along the margin.
- Share thoughts and ideas that demonstrate their approach to their work.

Other considerations

- During the **Experience First** phase, if most of your students seem stuck or disengaged, take a moment to pause, reset, and provide clear instructions. Some problems of the Activity are more suitable to do a whole-class discussion as a means to save some instructional time for Student Practice or the Exit Ticket. You are encouraged to adapt the EFFL (Experience First, Formalize Later) process to meet your students' needs while maintaining a focus on student-centered instruction.

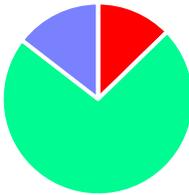

ROADMAP

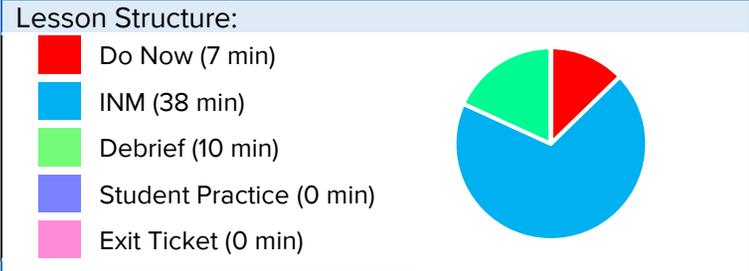

AT A GLANCE: Unit 8 – Circles			
Day	Date	Lesson	Lesson Title
<p>There are 5 flexible Success Days that you can use anywhere in the unit.</p> <ul style="list-style-type: none"> • Consider using 1 day to facilitate Lesson 7, a Mid-Unit review that addresses content from Lessons 1 - 6. • Consider using 1 day to administer Topic Quiz A between Lessons 7 and 8, and another day to administer Topic Quiz B after Lesson 10. • Consider using 1 day to review the day before UE8. For this review, consider using the provided review lesson, Lesson 8.11. • If you don't need to use all five flexible Success Days, consider saving one or more for future units.

<p>◆ G.11(B) determine the area of composite two-dimensional figures comprised of a combination of triangles, parallelograms, trapezoids, kites, regular polygons, or sectors of circles to solve problems using appropriate units of measure</p> <p>◆ G.12(A) apply theorems about circles, including relationships among angles, radii, chords, tangents, and secants, to solve non-contextual problems</p> <p>◆ G.12(B) apply the proportional relationship between the measure of an arc length of a circle and the circumference of the circle to solve problems</p> <p>◆ G.12(E) show that the equation of a circle with center at the origin and radius is $x^2 + y^2 = r^2$ and determine the equation for a graph of a circle with radius r and center (h, k), $(x - h)^2 + (y - k)^2 = r^2$.</p>	<p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> Review students' Unit 8 exit ticket data to determine what to prioritize during review Internalize Review Lesson 8.11 if you choose to use it <p>Lesson Structure:</p>  <p>Mathematical Goal of this Lesson By the end of this class period, students should get the opportunity to review major concepts from Unit 8.</p> <p>Other Notes to Inform Your Planning You should use this Success Day to review however you see fit. An optional review activity has been provided in the Teacher Edition called "Circuit Training" (Review Lesson 8.11). To prepare for today's Circuit Training review activity, ensure students have their Student Workbook. Plan to have extra copies of the Student Workbook Lesson 8.11 pages for students that do not have a workbook.</p> <p>To complete this activity, students should start in the upper left box, work the problem, then search for the answer in one of the other boxes. Once they find it, they will label that box #2, then work the new problem. Students will continue in this manner until they reach the 16th question, whose answer should be in box 1. If students "short-circuit" and return to the first box without having completed all the problems, they will know there was a mistake made somewhere. Students may work on the circuit individually, though they generally prefer to work in pairs or groups of three. You may wish to provide whiteboards (or other non-permanent surfaces) for students to work out problems and as a tool to facilitate collaboration among group members.</p> <p>Answers in the circuit are intentionally similar which keeps students from simply picking answers from context clues alone. Common wrong answers are often the correct answers to other problems, so students have to attend to precision in their problem solving and be ready to go back to problems and revise their thinking.</p>	<p>Look for teachers to...</p> <ul style="list-style-type: none"> <input type="checkbox"/> facilitate a review session that prioritizes what students need based on previous exit ticket and/or quiz data. <p>Look for students to...</p> <ul style="list-style-type: none"> <input type="checkbox"/> review Unit 8 topics in preparation for the Unit 8 exam. 	
			Student Know/Do Chart
			<p> Students can prepare for the Unit 8 Exam by reviewing Unit 8 content.</p>

Recommended Unit 8 Success Day Material and Resources

Date: _____

For more practice with equations of circles (Lesson 1), try...

- 22-23 MCR Lesson 8.11: Equations of Circles: TE | SW
- Imagine Math: Equations of Circles: TE | SW
- ThatQuiz: Equations of Circles
- ThatQuiz: Equations of Circles 2
- Desmos: Equation of a Circle

For more practice with circle vocabulary (Lesson 2), try...

- 22-23 MCR Lesson 8.1: Introduction to Circles: SW | TE
- Kuta Software: Arcs and Central Angles
- Khan Academy: Arc Length practice

For more practice with properties of tangents (Lesson 3), try...

- 22-23 MCR Lesson 8.6: Tangent Lines: SW | TE
- Geometry Coach: Tangent Lines
- GeoGebra: Properties of Tangents Drawn to Circles (B)
- GeoGebra: Tangent Chord Angles

For more practice with properties of chords and arcs (Lessons 4-5), try...

- 22-23 MCR Lesson 8.2: Central Angles and Arc Measures: SW | TE
- 22-23 MCR Lesson 8.4: Chords and Arcs: SW | TE
- Calc Workshop: Arc of a Circle
- GeoGebra: Perpendicular Bisector of a Chord
- GeoGebra: Properties of Chords in a Circle

For more practice with inscribed angles (Lesson 6), try...

- 22-23 MCR Lesson 8.5: Inscribed Angles: SW | TE
- Wolfram Demonstrations Project: Inscribed and Central Angles in a Circle

For more practice with area and circumference of a circle and/or area of a sector and arc lengths (Lessons 8-10), try...

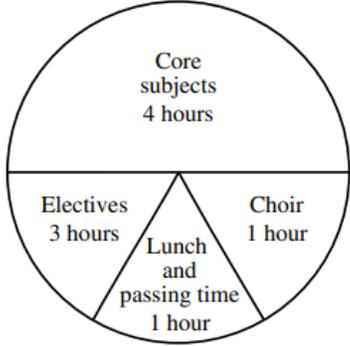

- 22-23 MCR Lesson 8.3: Circumference and Arc Length: SW | TE

For a combination of problem sets on various circle concepts, try...

- Progressive Math Initiative: Unit 8 Circles Packet

Standard(s)	Notes for Intellectual Preparation & Lesson Planning
<p>◆ G.11(B) determine the area of composite two-dimensional figures comprised of a combination of triangles, parallelograms, trapezoids, kites, regular polygons, or sectors of circles to solve problems using appropriate units of measure</p> <p>◆ G.12(A) apply theorems about circles, including relationships among angles, radii, chords, tangents, and secants, to solve non-contextual problems</p> <p>◆ G.12(B) apply the proportional relationship between the measure of an arc length of a circle and the circumference of the circle to solve problems</p> <p>◆ G.12(E) show that the equation of a circle with center at the origin and radius is $x^2 + y^2 = r^2$ and determine the equation for a graph of a circle with radius r and center (h, k), $(x - h)^2 + (y - k)^2 = r^2$.</p>	<p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> Print enough copies of UE8 Bluebook on Curriculum Corner (for the FRQ) and ensure you have access to the exam on Edcite. (If you do not have access to the exam, notify your TC and submit a Zendesk ticket ASAP.) <p>Notes to Inform Your Planning</p> <p>Review the Unit 8 Exam on Curriculum Corner. Internalize and create an exemplar for the assessment prior to teaching the unit as part of unpacking the unit. Use your exemplar to spar with the solutions provided in the Assessment Companion on Curriculum Corner.</p> <p>The scanning deadline for the Unit 8 Exam is March 5th, 2026. Consider administering the exam 1-3 school days BEFORE March 5th to allow sufficient time for grading the FRQ.</p> <p>Refer to the scoring guide to score the FRQ.</p>

VERTICAL STANDARDS

This section details the **progression** of key student expectations/standards** in the courses **before** and **after** this course. This will help you understand what **prior knowledge skills to build upon** and guide you in knowing what **skills you are preparing your students** for in the subsequent course.

7 th Grade	Geometry	Algebra II
<p>7.4E convert between measurement systems, including the use of proportions and the use of unit rates.</p> <p>7.5B describe π as the ratio of the circumference of a circle to its diameter.</p> <p>7.8C use models to determine the approximate formulas for the circumference and area of a circle and connect the models to the actual formulas.</p> <p>7.9B determine the circumference and area of circles.</p>	<p>G.12A apply theorems about circles, including relationships among angles, radii, chords, tangents, and secants, to solve non-contextual problems.</p> <p>G.12B apply the proportional relationship between the measure of an arc length of a circle and the circumference of the circle to solve problems.</p> <p>G.12E show that the equation of a circle with center at the origin and radius r is $x^2 + y^2 = r^2$ and determine the equation for the graph of a circle with radius r and center (h, k), $(x - h)^2 + (y - k)^2 = r^2$.</p>	<p>2A.4B write the equation of a parabola using given attributes, including vertex, focus, directrix, axis of symmetry, and direction of opening.</p> <p>2A.4D transform a quadratic function $f(x) = ax^2 + bx + c$ to the form $f(x) = a(x - h)^2 + k$ to identify the different attributes of $f(x)$.</p> <p>2A.6A analyze the effect on the graphs of $f(x) = x^3$ and $f(x) = \sqrt[3]{x}$ when $f(x)$ is replaced by $af(x)$, $f(bx)$, $f(x - c)$, and $f(x) + d$ for specific positive and negative real values of a, b, c, and d.</p> <p>2A.6C analyze the effect on the graphs of $f(x) = x$ when $f(x)$ is replaced by $af(x)$, $f(bx)$, $f(x - c)$, and $f(x) + d$ for specific positive and negative real values of a, b, c, and d.</p> <p>2A.6G analyze the effect on the graphs of $f(x) = 1/x$ when $f(x)$ is replaced by $af(x)$, $f(bx)$, $f(x - c)$, and $f(x) + d$ for specific positive & negative real values of a, b, c, & d.</p>
Algebra I	<p>G.11B determine the area of composite two-dimensional figures comprised of a combination of triangles, parallelograms, trapezoids, kites, regular polygons, or sectors of circles to solve problems using appropriate units of measure</p>	Pre-Calculus
<p>A.6B write equations of quadratic functions given the vertex and another point on the graph, write the equation in vertex form $f(x) = a(x - h)^2 + k$, and rewrite the equation from vertex form to standard form $f(x) = ax^2 + bx + c$.</p> <p>A.6C write quadratic functions when given real solutions and graphs of their related equations.</p> <p>A.7C determine the effects on the graph of the parent function $f(x) = x^2$ when $f(x)$ is replaced by $af(x)$, $f(x) + d$, $f(x - c)$, $f(bx)$ for specific values of a, b, c, and d.</p>		<p>P.3F determine the conic section formed when a plane intersects a double-napped cone.</p> <p>P.3G make connections between the locus definition of conic sections and their equations in rectangular coordinates.</p> <p>P.4C represent angles in radians or degrees based on the concept of rotation and find the measure of reference angles and angles in standard position.</p>
