How to Use This Addenda

Make sure you're ready to teach by noting the **Necessary Materials and Pre-Lesson Prep** you will need to gather or complete prior to the lesson

Find high-leverage instructional moves in the **Lesson Look Fors**. This is what leaders should see when observing your instruction

Note how your lesson objective ties to your state **Standards**

Plan purposeful questioning and responses using **Opportunities to CFU**

Note exemplar **Lesson Agenda** pacing in the **Lesson Agenda**

Use the **Mathematical Goal of the Lesson** to keep you focused on the appropriate student outcome

Plan instruction around what students need to Know & Do to be successful on the Exit Ticket using the identified **Student Know/Do Chart**

Plan to stress **Important Vocabulary** in the lesson. New vocab for the unit is indicated in bold

Find recommended lesson modifications, content knowledge boosters, and/or high-leverage instructional moves that may not be in your Teacher Edition located in **Other Notes to Inform Your Planning**

Standard(s)	Notes for Intellectual Preparation / Lesson Planning	Date:	Lesson Look Fors														
<p>3.4K solve one-step and two-step problems involving multiplication and division within 100 using strategies based on objects; pictorial models, including arrays, area models; and equal groups; properties of operations; or recall of facts</p>	<p>Necessary Materials and Pre-Lesson Prep</p> <ul style="list-style-type: none"> (S) Multiply by 2 (1–5) Pattern Sheet (S) Threes array no fill template (S) Personal white board (S) Blank paper <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Lesson Agenda</th> <th>Time</th> </tr> </thead> <tbody> <tr> <td>I. Do Now (source: fluency #1)</td> <td>5 min</td> </tr> <tr> <td>II. Fluency*</td> <td>8 min</td> </tr> <tr> <td>III. Concept Development</td> <td>25 min</td> </tr> <tr> <td>IV. Student Practice</td> <td>15 min</td> </tr> <tr> <td>V. Student Debrief</td> <td>7 min</td> </tr> <tr> <td>VI. Exit Ticket*</td> <td>5 min</td> </tr> </tbody> </table> <p>Mathematical Goal of this Lesson Students learn they can use decomposition to break one larger number into two smaller numbers as a strategy for multiplication. The goal of this lesson is simply for student to understand how to interpret and create an array that demonstrates such decomposition. Students will build on this understanding in subsequent lessons. This lesson also supports the goal of student thinking in terms of counting units, an overarching goal for academy math.</p> <p>Opportunities to CFU</p> <ul style="list-style-type: none"> ✓ Concept Development, by way of eliciting student responses ✓ Problems Set problems: #2, #3 <p>Other Notes to Inform Your Planning</p> <p>For Do Now: Use the Multiply by 2 (1–5) Pattern Sheet for your Do Now. 3 minutes for completion, 2 minutes whole group classwork check.</p> <p>For Fluency: Complete the Group Counting activity (notice the inclusion of 4s in preparation for upcoming lessons) and Forms of Multiplication activity.</p> <p>For Concept Development: Consider prepping personal whiteboard in advance. Spend no more than 12 minutes for CD Problem 1 and 13 minutes for CD Prob 2.</p> <p>For Student Practice: consider creating an extra set of Qs like 1-3 in case students struggle with entry-level understanding. If they don't, move on to Qs 4 and above.</p> <p>For Student Debrief: consider using the Eureka assigned Exit Ticket for whole group debrief exercise; Suggested strategy – guided discourse.</p> <p>For Exit Ticket: Use Homework problems 2 & 3 for this lesson's Exit Ticket.</p> <p><small>Though not formally discussed yet this is a foundation to understanding of distributive property. Students visually see multiplying the sum of two or more addends by a number will give the same result as multiplying each addend individually by the number and then adding the products together.</small></p>	Lesson Agenda	Time	I. Do Now (source: fluency #1)	5 min	II. Fluency*	8 min	III. Concept Development	25 min	IV. Student Practice	15 min	V. Student Debrief	7 min	VI. Exit Ticket*	5 min		<p>Lesson Look Fors</p> <p>Look for teachers to...</p> <ul style="list-style-type: none"> Have established a signaling routine for choral response or work show during the respective fluency activities Use a think aloud to describe why they shade what portions of the array, or use a different symbol in the array Make the focus of the lesson understanding the visual representations <p>Look for students to...</p> <ul style="list-style-type: none"> Explain what they see in the array and how it relates to a given number sentence. <p>Student Criteria for Success</p> <ul style="list-style-type: none"> Shading, brackets, and/or dotted lines on an array will have mathematical significance -brackets can identify parts or wholes -dotted lines and shading represent decompositions We count units; In an array, counting rows is the same as counting units. Addition/subtraction and multiplication math facts (up to 4) Interpret an array -identify decompositions within an array -Relate an annotated or labeled array to one or more number sentences Addition/subtraction (+/- up to 4) Multiplication (2, 3, and 4)
Lesson Agenda	Time																
I. Do Now (source: fluency #1)	5 min																
II. Fluency*	8 min																
III. Concept Development	25 min																
IV. Student Practice	15 min																
V. Student Debrief	7 min																
VI. Exit Ticket*	5 min																

UNIT SYNOPSIS

Conic sections are the curves that are formed when a plane cuts a cone, as shown in the figure. For example, if a cone is cut horizontally, the cross section is a circle. So, a circle is a conic section. Other ways of cutting a cone produce ellipses, parabolas, and hyperbolas. In this unit, you will find that for each conic (except the circle), there will be a lesson on how to generate the conic using its definition.

Our goal in this unit is to find equations whose graphs are conic sections. We will find such equations by analyzing the geometric properties of conic sections. These properties make conic sections useful for many real-world applications. For instance, a reflecting surface with parabolic cross sections concentrates light at a single point, a medical device called a lithotripter uses elliptical reflectors to break up kidney stones by generating sound waves, and more.

CONTENT STANDARDS

Below are the standards addressed in this unit.

Texas Essential Knowledge and Skills (TEKS)	
Knowledge and Skills	Student Expectations (SE)
<p>(3) Relations and Geometric Reasoning The student uses the process standards in mathematics to model and make connections between algebraic and geometric relations.</p>	<p>(3.F) Determine the conic section formed when a plane intersects a double-napped cone. (3.G)² Make connections between the locus definition of conic sections and their equations in rectangular coordinates; ²This standard will also be tagged for content on parabolas. (3.H) Use the characteristics of an ellipse to write and apply³ the equation of an ellipse with center (h, k). (3.I) Use the characteristics of a hyperbola to write and apply³ the equation of a hyperbola with center (h, k). ³Included to support AP readiness goals.</p>

<p>Focus on Disciplinary Literacy</p> 	<p>Mathematical Process Standard (F) – Analyze mathematical relationships to connect and communicate mathematical ideas.</p>
	<p>Mathematical Process Standard (G) – Display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication.</p>

To review **topics based on your data on Success Days**, a good source for additional resources is the Khan Academy Conic Sections Unit. Your exit ticket data should be used to determine individualized needs. The resources can be used in small groups, whole groups, or independent groups and be integrated with other classroom routines, like computer aligned practice and teacher-led groups.
